Revisions

Date	Description
March 12, 2016	Updated the required role for the "Get installed app details of a device" call.

Chapter 1

Introduction

The MobileIron V2 API is a RESTful API you use to send HTTPS requests to get data from and provide data to MobileIron. If you need other functionality using a MobileIron API, see the *API Reference Document for MobileIron WebService 9.0*, which describes how to use the V1 API.

Prerequisites for using the V2 API

Using the MobileIron V2 API requires:

- MobileIron login credentials for users with the necessary user roles to make the various API calls. You will send these credentials using basic authentication. [See "Authentication" on page 17.](#)
- familiarity with making REST API calls using the HTTPS protocol
- familiarity with JSON

Note: You cannot send API calls from the address bar of a browser because this API does not prompt you for credentials if you send a call from the address bar. You can use plugins like Poster for FireFox, and Postman or Advanced REST Client for Chrome, to test calls while you are coding calls into your application.

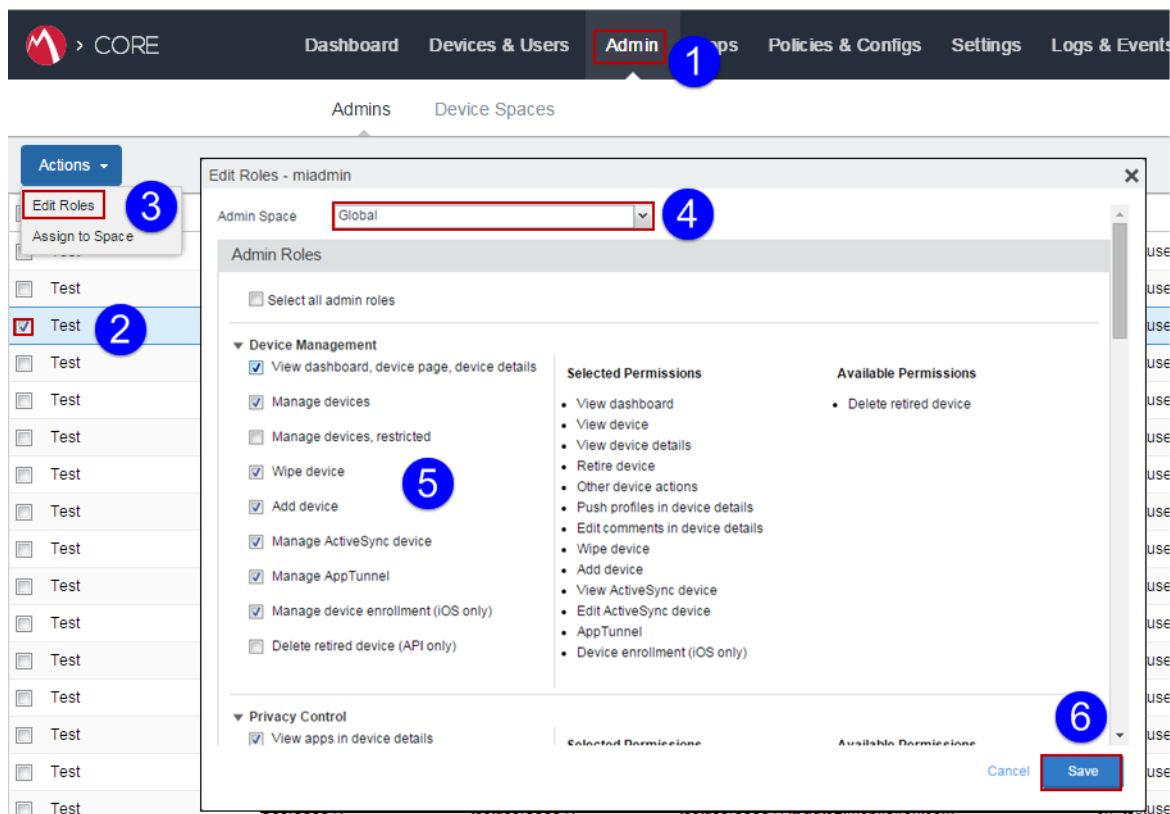

Authentication

The MobileIron V2 API requires basic authentication to authorize API calls. Each API call requires that the credentials you use for basic authentication belong to a user who has been assigned the necessary role to make that particular call. See ["Assigning admin roles to a user" on page 17](#) for how to assign required roles to MobileIron users, and the "Required Role" section of each API call description to determine the required role for each API call.

Assigning admin roles to a user

To assign admin roles to a user:

1. Log in to MobileIron and then click **Admin**.

2. Select a user.
3. Select **Edit Roles**.
4. Select a device space to which to assign the admin user.
5. Use the check boxes to select the roles needed to make the desired API calls. See the “Required Role” section of each API call description to determine the required role for each API call.
6. Click **Save**.

Making API Calls to MobileIron Connected Cloud

When making API calls to MobileIron Connected Cloud, prepend the URI with “rest/”. For example, if the call is “api/v2/devices/search_fields” in MobileIron Core, it would be “rest/api/v2/devices/search_fields” in MobileIron Connected Cloud.

HTTP response status codes

The MobileIron V2 API can return the following HTTP response status codes:

Response code	Description
200	Success.
400	Request error.

Response code	Description
401	Authentication failed. The request must contain a valid user ID and password for the target MobileIron Core instance.
404	Page not found. Check the spelling of the URL.
405	Invalid HTTP method.
500	Internal server error. MobileIron Core encountered an internal error while processing the request.

Response Language

The API supports JSON responses.

Using Postman to Test API Calls

If you encounter difficulties using Postman to test API calls, try sending a **Content-Type** header as **application/json**, and using the raw/JSON (application/json) input method to input your JSON object into the code field. For example, the API call described in ["Delete devices" on page 169](#) requires that you send a **Content-Type** header as **application/json**.

The screenshot shows the Postman interface for a REST client request. The URL is `https://[mobileiron core]/api/v2/devices?adminDeviceSpaceId=1`. The 'Authorization' tab is active, showing 'Basic bWlhZG1pbk8hdXRvMDAwf'. The 'Content-Type' header is set to 'application/json'. The 'raw' input method is selected, and the JSON body is: `{"deviceUids" : ["10c43352-15b2-413b-a3e0-4daf3977711a", "808AB98A-388E-4612-8579-43A40411670C"] }`.

Chapter 2

API status check

Get V2 API status

This call returns status information about the V2 API. It returns:

- whether the V2 API is available (implied by the presence of a return)
- the API version number
- the version and build number of the VSP

Required Role

See ["Authentication" on page 17](#) for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Any admin role

HTTP method

GET

Request URI

api/V2/ping

Request parameters

None.

Response fields

Field	Description
results	Container for the results
apiVersion	Version of the API.
vspVersion	Version and build number of the MobileIron Core.

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpwNaTRtYW4xMQ==" https://[mobileironcore]/api/v2/ping
```

Response

```
{
  "results": {
    "apiVersion": 2,
    "vspVersion": "VSP 8.0.0.0 Build 1 "
  }
}
```

}

Chapter 3

Admin Management

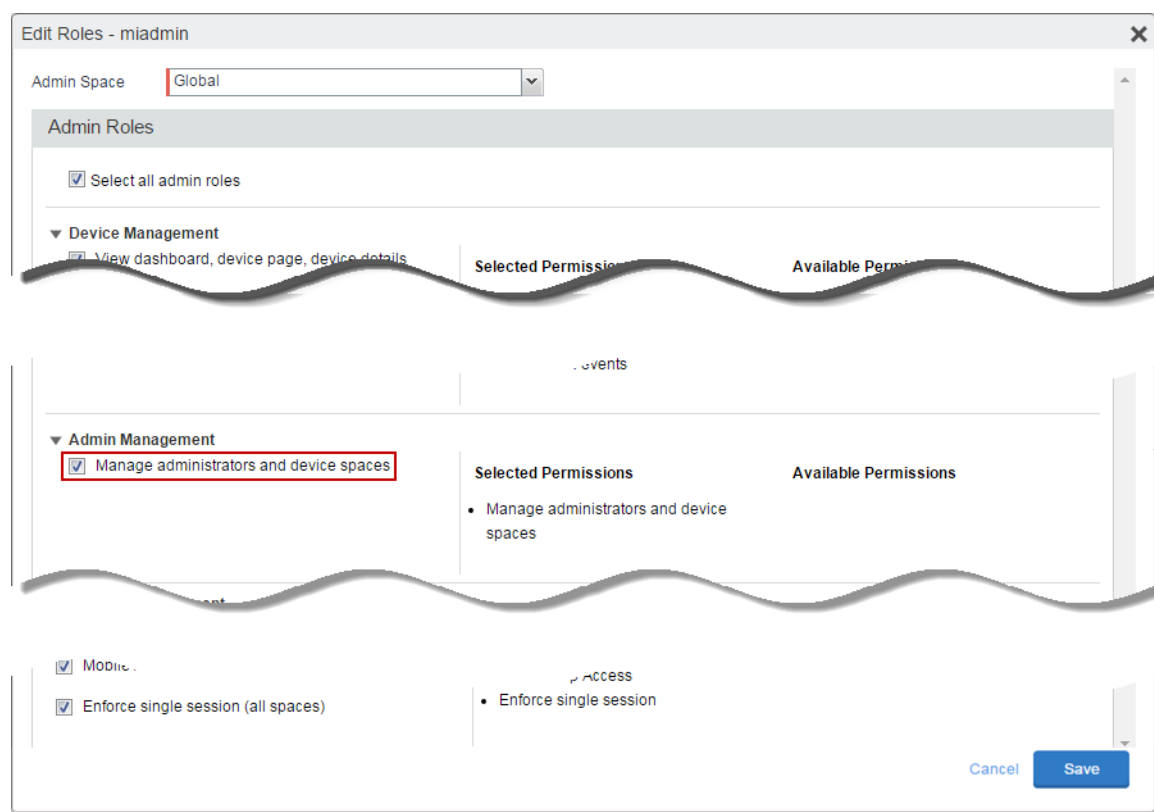

Find admin users

This call gets a list of all admin users in the system. You can use the call described in “Assign admins to device space” on page 199 to assign one of the retrieved users as the admin of a device space. A similar call, described in “Get admin user summary” on page 30, gets a list of admin users, but returns more details about each admin, namely, the name, email, source (local or LDAP), and assigned roles.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/admins/users

Request parameters

Parameter	Description	Sample Value
query	Parameter Type: Query Data Type: String Min: 1 character Max: 20 characters Search expression. May be the user name, the first name, or the last name. The call returns all admin users in the absence of this parameter. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	bsmith
limit	Parameter Type: Query Data Type: Number Min: 0 Max: 200 Default: 200 Indicates the maximum number of entries to return. Must be at least 0 and no more than 200.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
results	Container for the results set, which is an array of all admin users retrieved, including their user ID and name.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpwNaTRtYW4xMQ==" https://[mobileironcore]/api/v2/admins/users?adminDeviceSpaceId=1
```

Response

```
{
  "results": [
    {
      "userId": "misystem",
      "name": null
    },
    {
      "userId": "miadmin",
      "name": "miadmin"
    }
  ],
  "totalCount": 2,
  "resultCount": 2
}
```

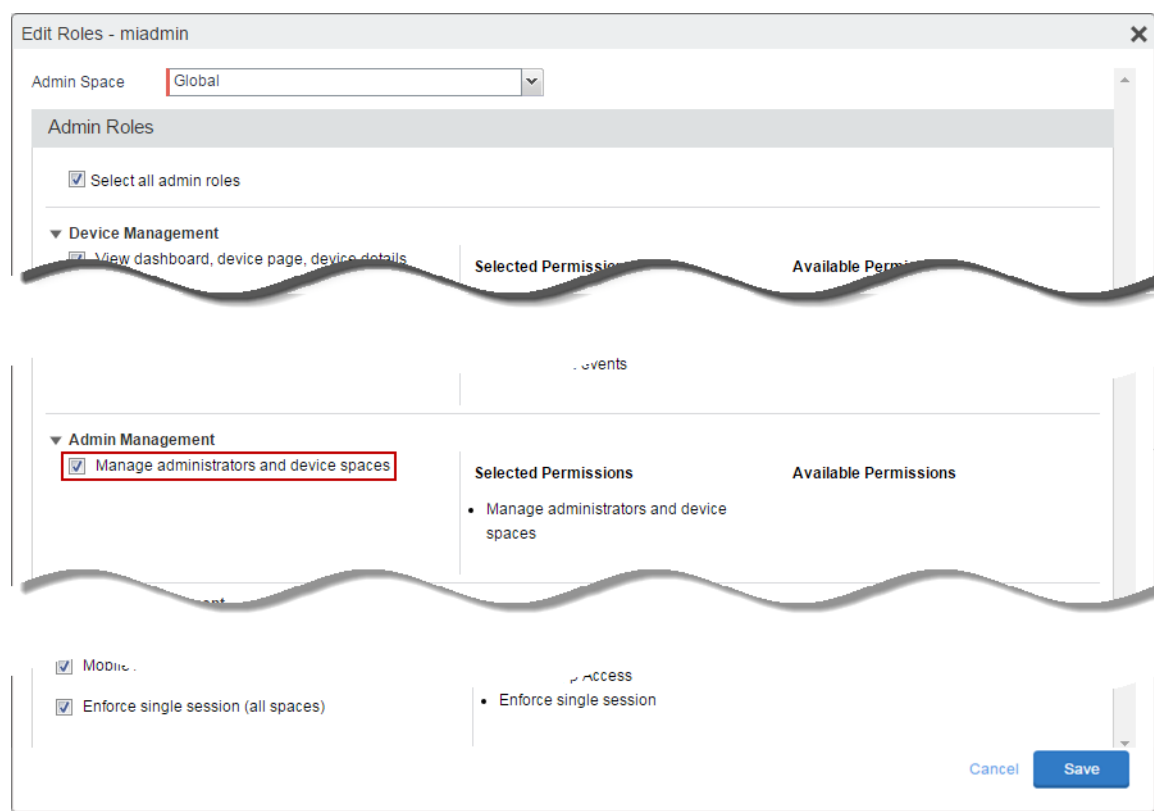

Find ldap entitites

This call finds LDAP entities, either Organizational Units (OUs), groups, or users, depending on which you specify with the type parameter.

Required Role

See "Authentication" on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/admins/ldap_entities

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
query	Required Parameter Type: Query Data Type: String Min: 1 character Max: 20 characters Search expression. May be the user name, the first name, or the last name. The call returns all admin users in the absence of this parameter. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	query=admin (This value instructs the call to search for ldap entities with the word "admin" in their name")
type	Required Parameter Type: Query Data Type: String Default: ALL Type of LDAP entity to search. May be OU, GROUP, or USER	type=user (This value instructs the call to search for LDAP users)
limit	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000 Default: 10,000 Indicates the maximum number of entries to return. Must be at least 0 and no more than 10,000.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	

Response fields

Field	Description
results	Container for the results set, which is an array of all LDAP entities retrieved, including each entity's ID, name, LDAP Distinguished Name (dn), and the type of LDAP entity.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpnNaTRtYW4xMQ==" https://[mobileironcore]/api/v2/admins/ldap_entities?type=user&query=admin&adminDeviceSpaceId=1
```

Response

```
{
  "results": [
    {
      "id": null,
      "name": "Administrator",
      "dn": "cn=admin, cn=users, dc=auto2, dc=mobileiron, dc=com",
      "type": "USER"
    }
  ],
  "totalCount": 1,
  "resultCount": 1
}
```

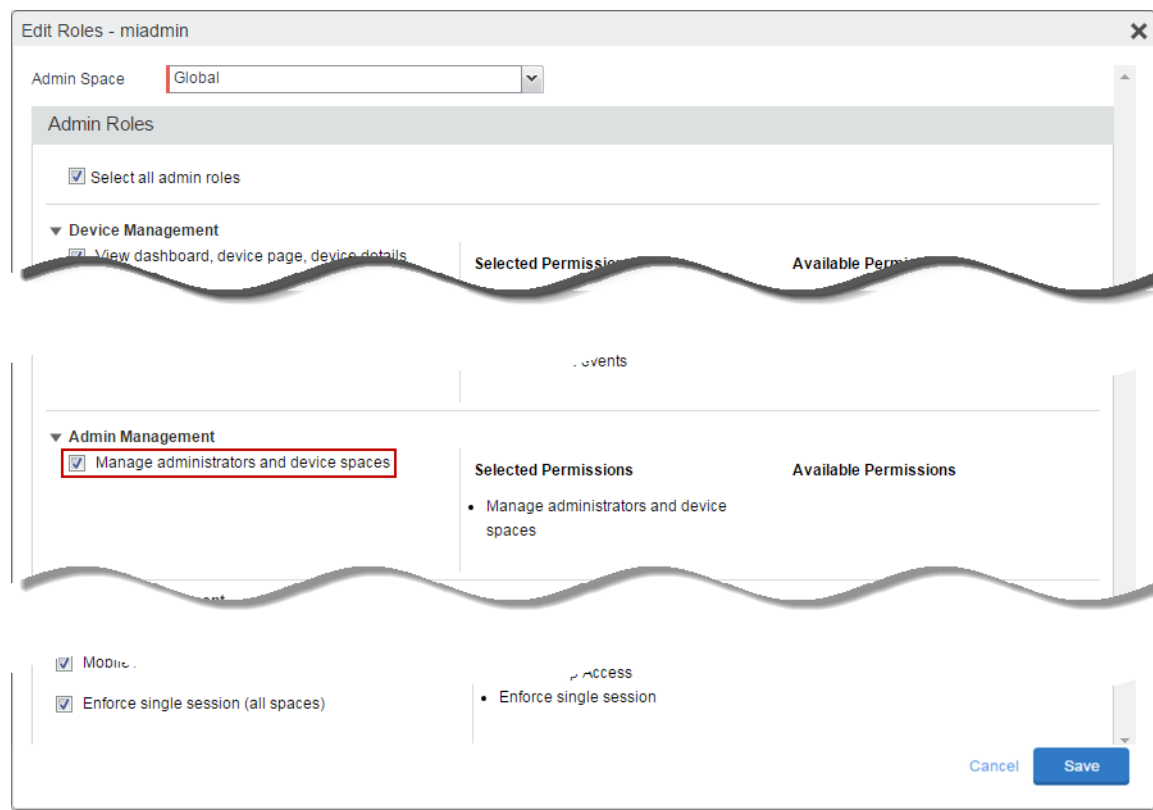

Get admin user summary

This call gets a detailed list of admin users that includes each admin’s name, email, source (local or LDAP), and assigned roles. A similar call described in “Find admin users” on page 24, gets a list of admin users, but only returns the user ID and name for each admin user.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/admins/user_summary

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
limit	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000 Default: 10,000 Indicates the maximum number of entries to return. Must be at least 0 and no more than 10,000.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Parameter	Description	Sample Value
query	Parameter Type: Query Data Type: String Min: 1 character Max: 20 characters Search expression. May be the user name, the first name, or the last name. The call returns all admin users in the absence of this parameter. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	query=admin (This value instructs the call to search for admin entities with the word "admin" in their name")
page	Parameter Type: Query Data Type: integer Instructs the API on which page of results to start returning results.	1
start	Parameter Type: Query Data Type: integer Instructs the API at which record on the specified page of results to start returning results.	0

Response fields

Field	Description
results	An array of entry objects: name, userId, email, source (LDAP or Local), roles (id, description), adminSpaces (id, name)
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.

Sample request and response

Request

Get ldap entity summary

This call gets detailed information on all admin LDAP admin entities. Returns the id, name, dn, type, member count (germane for OUs and GROUPS), first name, last name, email, and roles for each found admin LADAP entity.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/admins/ldap_entity_summary

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
query	Parameter Type: Query Data Type: String Min: 1 character Max: 20 characters Search expression. May be the user name, the first name, or the last name. The call returns all admin users in the absence of this parameter. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	query=admin (This value instructs the call to search for ldap entities with the word "admin" in their name")
type	Required Parameter Type: Query Data Type: Number Default: ALL Type of LDAP entity to search. May be OU, GROUP, USER, or ALL.	type=user (This value instructs the call to search for LDAP users)
limit	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000 Default: 10,000 Indicates the maximum number of entries to return. Must be at least 0 and no more than 10,000.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	

Parameter	Description	Sample Value
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

results	Container for the results set, which is an array of all LDAP entities retrieved, including each entity's id, name, dn, type, member count (germane for OUs and GROUPS), first name, last name, email, and roles.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpnNaTRtYW4xMQ==" https://[mobileironcore]/api/v2/admins/ldap_entity_summary?type=USER&query=testuser00023&adminDeviceSpaceId=1
```

Response

```
{
  "results": [
    {
      "id": null,
      "name": "testuser000230",
      "dn": "cn=testuser000230,ou=contacts,dc=auto2,dc=mobileiron,dc=com",
      "type": "USER",

    },
    ],
    "totalCount": 10,
    "resultCount": 10
}
```

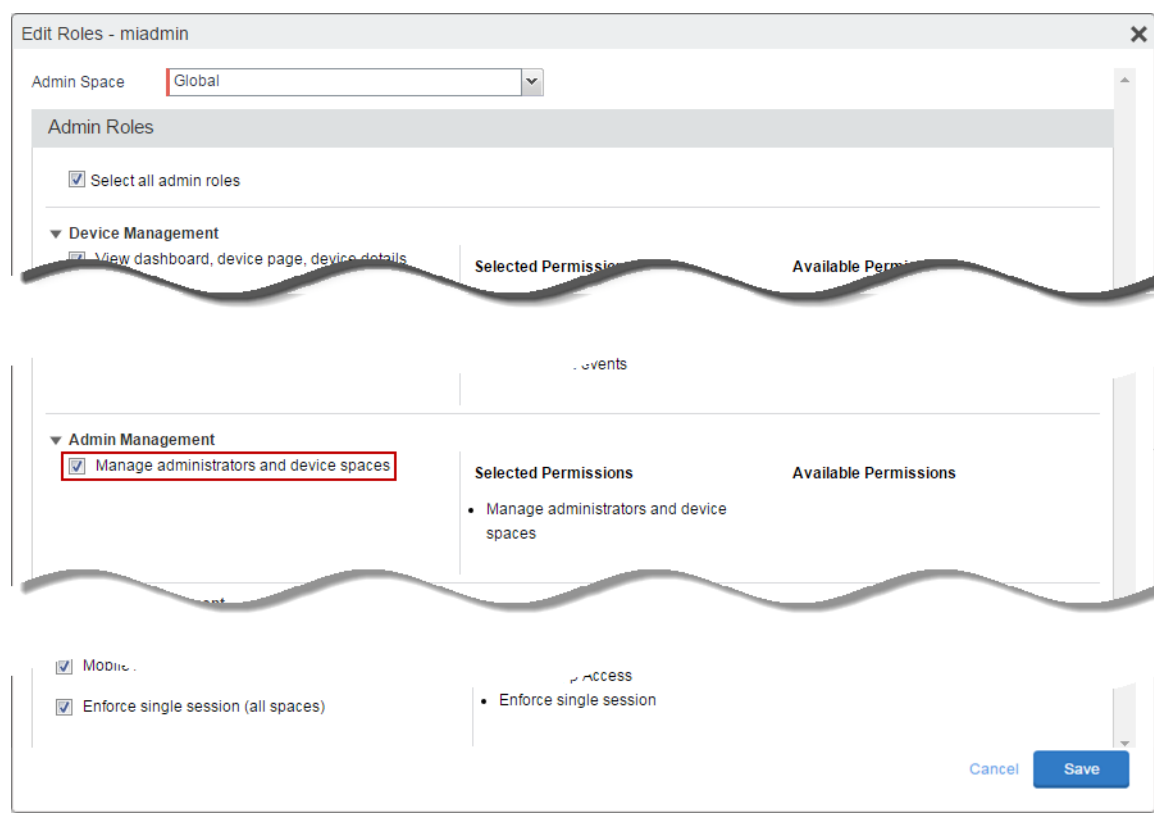

Get a list of admin roles

This call returns all admin roles and associated permissions. You can use this call before issuing the call described in “Assign admins to device space” on page 199, so you know which string values to use for the roles you assign to admins you assign to device spaces.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/admins/roles

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1

Response fields

results	Container for the results set, which is an array of all roles, including the following fields for each role: category, roleAndPermissions, roleId, roleDescription, defaultSpaceOnly, and permissions. The values for roleId are the ones you use for the roles parameter when making the call described in "Assign admins to device space" on page 199 .
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
results	Container for the results set, which is an array of all LDAP entities retrieved, including each entity's id, name, dn, type, member count (germane for OUs and GROUPS), first name, last name, email, and roles.
totalCount	The total number of entries that the query matched.

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpnNaTRtYW4xMQ==" https://[mobileironcore]/api/v2/admins/roles?adminDeviceSpaceId=1
```

Response

```

Chapter 4

Admin Actions Management

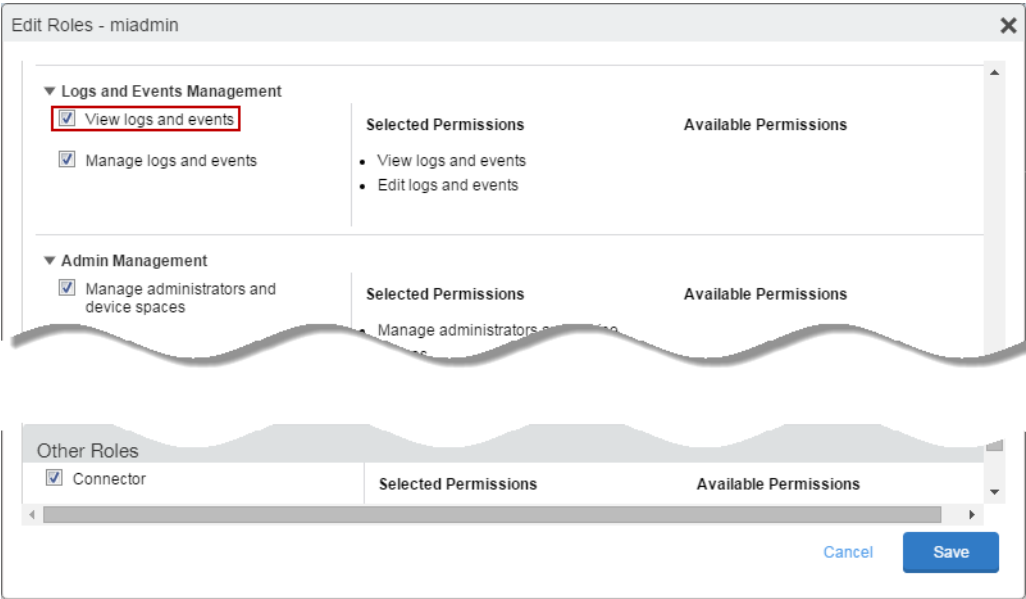

Get Action Types

This call returns all the admin action categories that are audit logged.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Logs and Events Management
Role Description: View logs and events
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/admins/{source}/actions

Request parameters

Parameter	Description	Sample Values
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
source	Parameter Type: Path Data Type: String Specifies the source from which the api call requests audit logged Admin actions. The api can request audit logged actions from two places, the Audit Logs page and Device Details Page. Sending a blank value for the source parameter returns all the categories and its action types. Sending deviceDetails , which means the source is Device Details Page, removes all the User related actions in the Certificate category, and returns all categories and action types as is.	api/v2/admins/ deviceDetails /actions or api/v2/admins/actions

Response fields

Field	Description
category	Returns the category name of logically grouped action types.
actions	An array containing all the action types under the category. Entries in this array have the following fields <ul style="list-style-type: none">• id: Id of the action type• name: Action type name• category: Action type category• displayName: UI display name of the action type

Sample request and response

Request

Get all the categories and their action types

```
curl -sS -k -u <userName>:<password> -G https://<mobileironcore>/api/v2/admins/actions?adminDeviceSpaceId=1
```

Response

In the interest of brevity, this response sample contains only one category and all of its included actions.

Chapter 5

App Inventory Management

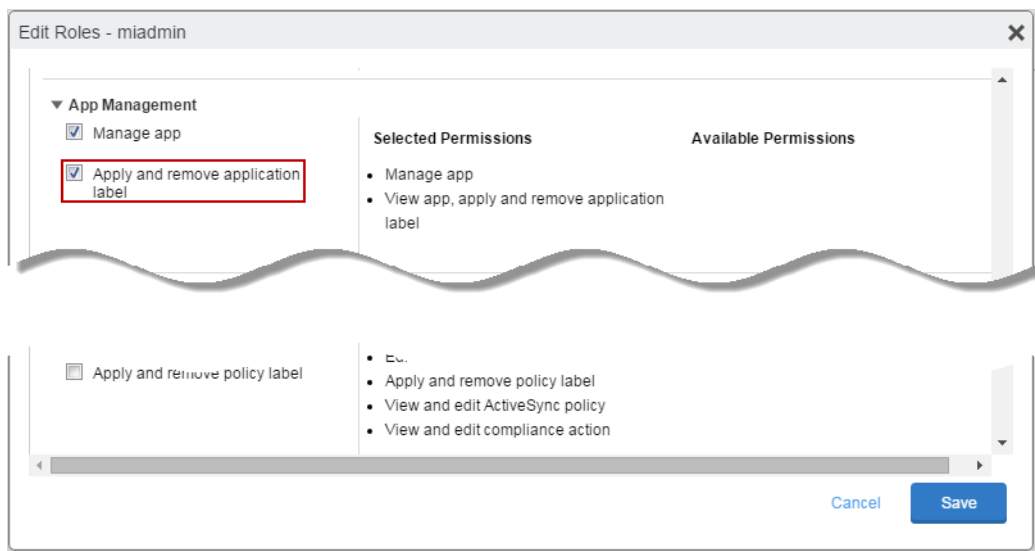

Get list of installed apps

This call returns a list of installed apps. The api can return apps from all platforms or specific platforms.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Apply and remove application label
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/appinventory/apps

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
summaryView	Parameter Type: Query Data Type: Boolean Default: false Summary view returns installed apps by app ID. Detailed view returns installed apps by ID and version.	false
platformType	Parameter Type: Query Data Type: Char Specifies from which platform to return installed apps. Default to return apps from all platforms. Valid values: I, A, M, E, Q <ul style="list-style-type: none"> • I = iOS • A = Android • M = Windows Phone • E = Windows 10 and Windows 8.1 • Q = Web Application 	A
limit	Parameter Type: Query Data Type: Number Min: 0 Indicates the maximum number of entries to return. Must be at least 0 and no more than 200.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	

Parameter	Description	Sample Value
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
results	An array of the following objects: inventory ID, name, app ID, platformType, version, displayName, deviceCount, permissionCount, appRating, appScore, dateFound
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
hasMore	Indicates that there are more entries available.

Sample request and response

Request

```
curl -k -v -sS -u <userName>:<password> -XGET 'https://<mobileironcore>/api/v2/appinventory/apps?adminDeviceSpaceId=1&limit=2&offset=0'
```

Response

```
{
  "totalCount": 72906,
  "resultCount": 2,
  "hasMore": true,
  "results": [
    {
      "id": 100109,
      "name": "Casino CrapsAutoGenApp42188",
      "identifier": "application.identifier.Casino CrapsAutoGenApp42188",
      "platformType": "I",
      "version": "1.0",
      "displayVersion": "1.0",
      "deviceCount": 0,
```

```
"permissionsCount": 0,
"appRating": 0,
"appScore": null,
"dateFound": 1447475953000
},
{
  "id": 100110,
  "name": "Casino CrapsAutoGenApp42189",
  "identifier": "application.identifier.Casino CrapsAutoGenApp42189",
  "platformType": "I",
  "version": "3.3",
  "displayVersion": "3.3",
  "deviceCount": 0,
  "permissionsCount": 0,
  "appRating": 0,
  "appScore": null,
  "dateFound": 1447475953000
}
]
}
```

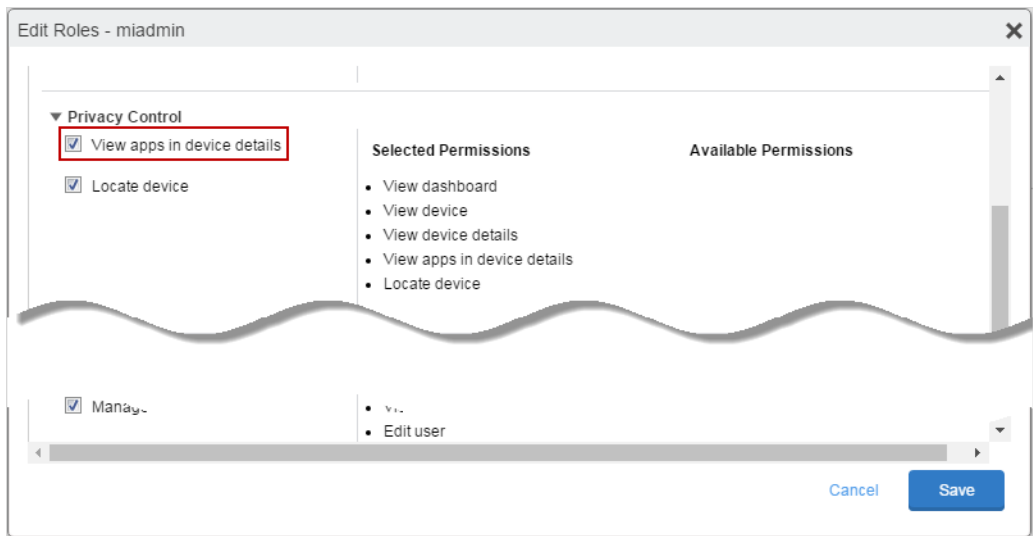

Get installed app details of a device

This call returns a list of installed apps on a device or a list of devices.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Privacy Control
Role Description: View apps in device details
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/devices/appinventory

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
deviceUids	Parameter Type: Query Data Type: String list Default: false Comma separated list of device uids. Maximum combined number of 25 deviceUids and wifiMacs.	df5e84fa-ffc0-47d7-98c2-300a4ada396b
wifiMacs	Parameter Type: Query Data Type: String list Comma separated list of device wifi mac addresses. Maximum combined number of 25 deviceUids and wifiMacs.	AC3C0B79FED7

Response fields

Field	Description
messages	Messages section
type	Message type
messageKey	Message key
localizedMessage	Localized message with parameters resolved
results	Array of device details follow
deviceId	Details for this device uuid
appInventory	List of device apps follows
name	Name of app installed on the device
identifier	App identifier
version	App version
platformType	App platform type
status	App status
vpnName	App vpn name
configurations	List of app connect configurations follow
typeId	Configuration type id
clientId	Device client id
appId	App identifier

Field	Description
modifiedAt	Timestamp of record modification
appUuid	App uuid
agentUuid	Agent uuid
coreUuid	Core uuid
name	App connect name
state	State
message	If there is an app (appUuid), client (agentUuid) or config (coreUuid) mismatch then old equals "true". Message will contain a description when old equals "true".
old	If there is an app (appUuid), client (agentUuid) or config (coreUuid) mismatch then old equals "true". Message will contain a description when old equals "true".

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XGET 'https://<mobileironcore>/api/v2/devices/appinventory?adminDeviceSpaceId=1&deviceUids=df5e84fa-ffc0-47d7-98c2-300a4ada396b,123&wifiMacs=AC3C0B79FED7,123'
```

Response

```

Get devices that have a specific app installed

This call returns a list of devices that have a specific app installed.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Apply and remove application label
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/appinventory/devices

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
inventoryId	Required: One of inventoryId, appName ,or AppId is mandatory. Parameter Type: Query Data Type: Integer Use /appinventory/apps?summaryView=false to get InventoryID.	14
appName	Required: One of inventoryId, appName ,or AppId is mandatory. Parameter Type: Query Data Type: String The name of the app.	Hangouts
appId	Required: One of inventoryId, appName ,or AppId is mandatory. Parameter Type: Query Data Type: String Bundle ID of the app.	com.google.hangouts
platformType	Parameter Type: Query Data Type: String Specifies from which platform to return installed apps. Default to return apps from all platforms. Valid values: I, A, M, E, Q <ul style="list-style-type: none"> • I = iOS • A = Android • M = Windows Phone • E = Windows 10 and Windows 8.1 • Q = Web Application 	A
appVersion	Parameter Type: Query Data Type: String Specifies the version of the app.	5.1.20393

Parameter	Description	Sample Value
limit	Parameter Type: Query Data Type: Number Min: 0 Indicates the maximum number of entries to return. Must be at least 0 and no more than 200.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
sortField	Parameter Type: Query Data Type: String Valid Values: <ul style="list-style-type: none"> • phonenumbers (device current phone number) • username (device user principal) • platform (device platform) • version (app inventory version) 	phonenumbers
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
results	An array of the following objects: uuid, id, principal, deviceSpaceId, deviceSpacePath, username, platform, os, phonenumber, model, version, name, managed, and vppAccountName.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
hasMore	Indicates that there are more entries available.

Sample request and response

Request

```
curl -k -v -sS -u <userName>:<password> -XGET 'https://<mobileironcore>/api/v2/appinventory/
devices?adminDeviceSpaceId=1&inventoryId=14&sortField=username&sortOrder=ASC&page=1&offset=0&limit=50'
```

Response

```
{
  "totalCount":2,
  "resultCount":2,
  "hasMore":false,
  "results":[
    {
      "uuid":"a27d569a-33e0-4712-ab2f-10ec9d343fda",
      "id":2,
      "principal":"miadmin",
      "deviceSpaceId":1,
      "deviceSpacePath":"/1/",
      "username":"miadmin",
      "platform":"iOS 9.1",
      "os":"I",
      "onenumber":"PDA 2",
      "model":"iPad Mini",
      "version":"8536168",
      "name":"miadmin",
      "managed":false,
      "vppAccountName":null
    },
    {
      "uuid":"526bc7a4-2d2e-4230-a766-05e94777c01d",
      "id":1,
      "principal":"miadmin",
```

```
        "deviceSpaceId":1,  
        "deviceSpacePath":"/1/",  
        "username":"miadmin",  
        "platform":"iOS 9.1",

        "vppAccountName":null  
    }  
]  
}
```

Chapter 6

App Store Management

Get app data by id

This call gets app data by app id.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/appstore/apps/{id}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
id	Required Parameter Type: Query Data Type: Number The app's ID. You can find it by issuing the GET /api/v2/appstore/apps call without an ID.	2

iOS Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of retrieved objects shown in the following rows.

Search Apple iTunes App Store by name/description

This call searches for apps in the iTunes app store using a keyword from the app’s name or description.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/appstore/itunes

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Request body Data Type: Number Device space ID of the administrator.	1
query	Required Parameter Type: Request body Data Type: String Keyword from the app name or description.	mobileiron
countryCode	Required Parameter Type: Request body Data Type: String Two character ISO country code.	US
limit	Parameter Type: Query Data Type: Number Indicates the maximum number of entries to return. Must be at least 0 and no more than 200. 0 returns all results.	

Response fields

Field	Description
messageKey	Message key for the localized message bundle.
messageParameters	Parameters for the localized message.
localizedMessageWithParameters	Localized message with parameters unresolved.
localizedMessage	localized message with parameters resolved.
result	An array of retrieved objects shown in the following rows.
artistId	
artistName	
artistViewUrl

Import iTunes app by track id

This call searches for an app in the iTunes by the app's track id, and then imports it if it is available.

Required Role

See "Authentication" on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

POST

Request URI

api/v2/appstore/itunes

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
trackId	Required Parameter Type: Query Data Type: Long App's trackId on iTunes.	530168168
countryCode	Parameter Type: Query Data Type: String Default: The browser's locale country code. The two character ISO code of the country within which the app should be looked up.	US
languageCode	Parameter Type: Query Data Type: String Default: The browser's locale language code. The ISO code of the language for the description of the app, if available.	EN
forceUpdate	Parameter Type: Query Data Type: Boolean Default: True Whether the existing app with the same bundle ID should be overwritten if it exists.	False

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of retrieved objects shown in the following rows.

      "shortDescription": "Instantly reach the people in your life—for free. Messenger is just like texting, but you don't have to pay for every message (it works with your data plan). Not just for Facebook friends: Message people in your phone book and just enter a phone number to add a new contact. Group chats: Create groups for the people you message most. Name them, set group photos and keep them all in one place. Photos and videos: Shoot videos and snap selfies or other photos right from the app and send them with one tap. Chat heads: Keep the conversation going while you use other apps. Free calls: Talk as long as you want, even with people in other countries. (Calls are free over Wi-Fi. Otherwise, standard data charges apply.) Even more ways to message: Bring your conversations to life with stickers. Preview your gallery photos and videos without leaving the conversation--then choose the perfect ones to send. Record voice messages when you have more to say. Extra features: Know when people
```

have seen your messages. Forward messages or photos to people who weren't in the conversation. Search for people and groups to quickly get back to them. Turn on location to let people know when you're nearby. See who's available on Messenger and who's active on Facebook. Create shortcuts to get to any conversation right from your home screen. Turn off notifications when you're working, sleeping or just need a break. Stay logged in so you never miss a message.",

    "description": "Canvas replaces expensive and inefficient paper business forms with mobile
apps for your smartphones and tablets. Canvas is easy to use - no programming skills required.
```

Canvas lets you...

- Replace paper forms with mobile apps in minutes
- Create mobile inspections, work orders, invoices, expense reports, checklists, etc.
- Collect information using your mobile device
- Share data securely in the cloud with customers and colleagues
- Choose from over 14,000 \"starter\" apps (customizable, pre-built forms)

Download the Canvas app and sign up for a free 30-day trial. No credit card required.

Special Promotion: Canvas will convert your first paper form into a mobile app for FREE!

About Canvas:

Canvas is a cloud-based software service that allows businesses to replace expensive and inefficient paper forms with powerful apps on their smartphones and tablets. Canvas enables users to collect information using mobile devices, share that information and easily integrate with existing backend systems. Canvas also offers the first business-only application store of its kind, with 14,000+ pre-built, fully customizable apps that work on all mobile platforms and serve 30+ vertical markets.

Every Canvas app is customizable by the end user and can incorporate functionality such as GPS, image capture, calculations, dispatch, electronic signatures, and access to business data such as parts catalogs, price lists and customer records.

Canvas has automated millions of manual processes and replaced over 30 tons of paper for businesses, making it one of the fastest growing mobile app services in the world.",

}
```

Add a web application

This call adds a web application

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/appstore/webapp

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
name	Required Parameter Type: Request body Data Type: String Name of the web application.	Online Meet Entry
webAppUrl	Parameter Type: Request body Data Type: String URL of the web application.	http:// ome.swimconnection.c om/meets

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of retrieved objects shown in the following rows.
messagingSupported	
provisioningProfile	
unmanagedUpdateAllowed	
hiddenInAppstore	
noCostApp	
ipadOnly	
apnsCertificate	
cdnDisabled

```

Update app data

This call updates an app’s data. Available fields to update vary by platform type and these fields are described below.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/appstore/apps/{id}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
id	Required Parameter Type: Query Data Type: Number The app's ID. You can find it by issuing the GET /api/v2/appstore/apps call without an ID.	2
appData	Required Parameter Type: Query Data Type: String A file containing a JSON string representation of the app fields to modify, as one of the Multipart request parts. Available fields vary by platform type. See Common appData request parameters , iOS appData request parameters , and Android appData request parameters below.	/Users/ssmith/editreq2.json
icon	Parameter Type: Query Data Type: Multipart file Icon file to replace any existing icon.	icon=@/Users/ssmith/icon.png
phoneScreenshot	Parameter Type: Query Data Type: Multipart file An array of phone screenshot files to add to existing screenshots.	phoneScreenshot=@/Users/ssmith/ss1.png
tabletScreenshot	Parameter Type: Query Data Type: Multipart file An array of tablet screenshot files to add to existing screenshots..	tabletScreenshot=@/Users/ssmith/tss1.png

Common appData request parameters

Parameter	Description	Sample Value
appld	Required Parameter Type: Request body Data Type: Number The appld of the app to update.	
platformType	Required Parameter Type: Request body Data Type: String The platform type on which the app runs.	iPhone
name	Parameter Type: Request body Data Type: String	
description	Parameter Type: Request body Data Type: String	
publicStoreId	Parameter Type: Request body Data Type: String	
featuredApp	Parameter Type: Request body Data Type: Boolean	
perAppVpnByLabelOnly	Parameter Type: Request body Data Type: Boolean	
quarantinable	Parameter Type: Request body Data Type: Boolean	
pushedOnRegistration	Parameter Type: Request body Data Type: Boolean	
backupPrevented	Parameter Type: Request body Data Type: Boolean	
dataProtectionRequired	Parameter Type: Request body Data Type: Boolean	
overrideURL	Parameter Type: Request body Data Type: String	
cdnDisabled	Parameter Type: Request body Data Type: Boolean	
vpnIds	Parameter Type: Request body Data Type: Integer VPN ID's. Replaces any existing VPN ID's	

Parameter	Description	Sample Value
categories	Parameter Type: Request body Data Type: Integer ID's of categories. Replaces any existing category associations.	
deletedResources	Parameter Type: Request body Data Type: String UUID's of resources to delete.	

iOS appData request parameters

Parameter	Description	Sample Value
noCostApp	Required Parameter Type: Request body Data Type: Boolean	
hiddenInAppstore	Required Parameter Type: Request body Data Type: Boolean	
ipadOnly	Parameter Type: Request body Data Type: Boolean	

Android appData request parameters

Parameter	Description	Sample Value
mandatory	Required Parameter Type: Request body Data Type: Boolean	
versionRequired	Required Parameter Type: Request body Data Type: Boolean	
minimumOsVersion	Parameter Type: Request body Data Type: String	
androidWork	Parameter Type: Request body Data Type: Boolean	
silentInstall	Parameter Type: Request body Data Type: Boolean	

Parameter	Description	Sample Value
uninstallBlocked	Parameter Type: Request body Data Type: Boolean	
restrictions	Parameter Type: Request body Data Type: Object Array of Android For Work app restrictions.	[{"displayValue": null, "values": null, "value": "false", "type": "BOOL", "key": "can_read_personal_emails", "title": "Can Read Personal Emails"}]

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of returned objects.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XPOST 'https://<mobileironcore>/api/v2/appstore/apps/update/15?adminDeviceSpaceId=1' -F "appData=@/Users/ssmith/editreq2.json" -F phoneScreenshot=@/Users/ssmith/ss1.png -F phoneScreenshot=@/Users/ssmith/ss2.png -F icon=@/Users/ssmith/icon.png
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "App successfully updated.",
      "messageKey": "com.mobileiron.vsp.messages.appstore.update.app.success",
      "type": "Info"
    }
  ],
  "results": { ... }
}
```

Upload app screenshot

This call uploads an app screenshot.

Required Role

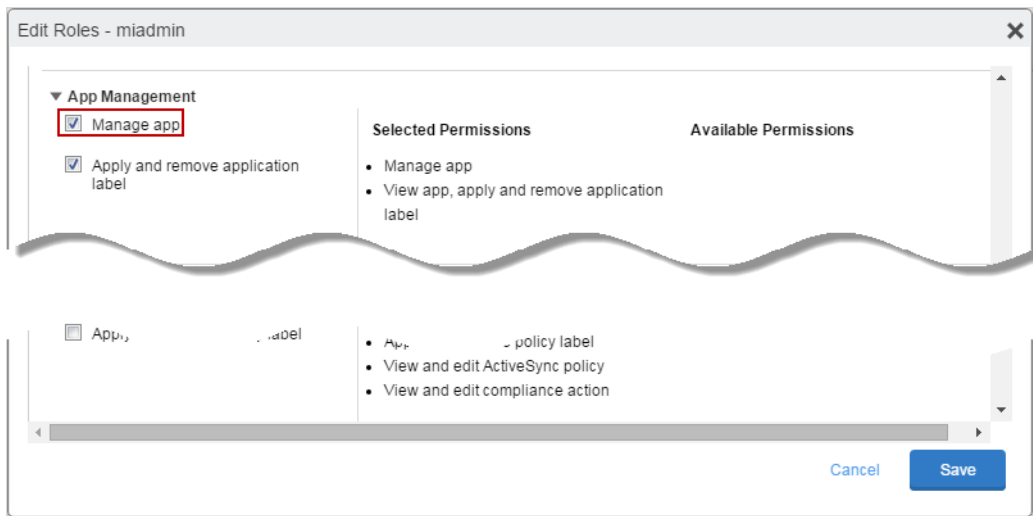

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: App Management

Role Description: Manage app

Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/appstore/apps/{id}/{type}/screenshots

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
id	Required Parameter Type: Path Data Type: Number The id of the app whose screenshot to upload.	2
type	Required Parameter Type: Path Data Type: String Type of screenshot to upload. Valid values are: <ul style="list-style-type: none">• phone• tablet	phone

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of retrieved objects shown in the following rows.
url	
uuid	
fileName	

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XPOST 'https://<mobileironcore>/api/v2/appstore/apps/2/tablet/screenshots?adminDeviceSpaceId=1' -F screenshot=@/Users/srolls/Downloads/evernote_tablet2.png
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "\"Screenshot added successfully.\""
```

```
    "messageKey": "com.mobileiron.vsp.messages.appstore.add.screenshot.success",
    "type": "Info"
  }
],
"results": {
  "url": "/mifs/image/app.html?command=getAppArtifact&action=getAppArtifact&appid=2&uuid=d9a45b45-
05d6-4526-b458-92404d6453fd&ext=PNG",
  "uuid": "d9a45b45-05d6-4526-b458-92404d6453fd",
  "fileName": "evernote_tablet2.png"
}
}
```

Get all app categories

This call gets a list of all app categories.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/appstore/categories

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of retrieved objects shown in the following rows.
description	
name	
id	

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XGET 'https://<mobileironcore>/api/v2/appstore/categories?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "Categories successfully fetched.",
      "messageKey": "com.mobileiron.vsp.messages.appstore.get.categories.success",
      "type": "Info"
    }
  ],
  "results": [
    {
      "description": "The first category",
      "name": "Category 1",
      "id": 1
    },
    {
      "description": "The second category",
      "name": "Category 2",
      "id": 2
    }
  ]
}
```

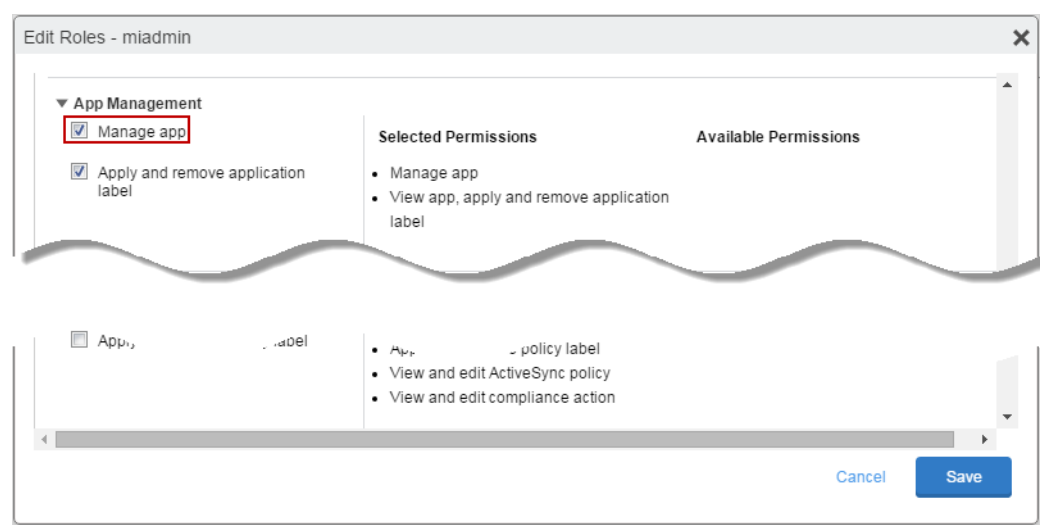

Get information about a specific app category

This call returns information about a specific app category.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/appstore/categories/{id}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
id	Required Parameter Type: Path Data Type: Number ID of the app category whose information to retrieve. You can get this value with the Get all app categories call.	2

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of retrieved objects shown in the following rows.
description	
name	
id	

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XGET 'https://<mobileironcore>/api/v2/appstore/categories/1?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "Categories successfully fetched.",
      "messageKey": "com.mobileiron.vsp.messages.appstore.get.categories.success",
      "type": "Info"
    }
  ],
  "results": {
    "description": "The first category",
    "name": "Category 1",
    "id": 1
  }
}
```

}
}

Create an app category

This call creates an app category.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/appstore/categories

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
name	Required Parameter Type: Request body Data Type: String Name of the category to create.	Action Game
description	Required Parameter Type: Request body Data Type: String Description of the category to create.	Action games with multiple player capability.

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	A number representing how many new categories were created.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -H "Content-Type: application/json" --data '{"name":"Category 1", "description":"The first category"}' -XPOST 'https://<mobileironcore>/api/v2/appstore/categories?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "Category created successfully.",
      "messageKey": "com.mobileiron.vsp.messages.appstore.create.category.success",
      "type": "Info"
    }
  ],
  "results": 1
}
```

Edit an app category

This call edits an app category.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/appstore/categories/{id}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
name	Parameter Type: Request body Data Type: String Updated category name.	Memory Game
description	Parameter Type: Request body Data Type: String Updated category description.	Memory games with multiple player capability.

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -H "Content-Type: application/json" --data '{"name":"Category One", "description":"The 1st category"}' -XPUT 'https://<mobileironcore>/api/v2/appstore/categories/1?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "Category successfully updated.",
      "messageKey": "com.mobileiron.vsp.messages.appstore.update.category.success",
      "type": "Info"
    }
  ]
}
```

Delete an app category

This call deletes an app category.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: App Management

Role Description: Manage app

Finding this role in MobileIron Core

HTTP method

DELETE

Request URI

/api/v2/appstore/categories/{id}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XDELETE 'https://<mobileironcore>/api/v2/appstore/categories/2?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "Category successfully updated.",
      "messageKey": "com.mobileiron.vsp.messages.appstore.delete.category.success",
      "type": "Info"
    }
  ]
}
```

Get per app list of VPNs

This call gets the list of available per app VPNs.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/appstore/perappvpns

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.
results	An array of retrieved objects shown in the following rows.
name	
id	

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XGET 'https://<mobileironcore>/api/v2/appstore/perappvpns?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "localizedMessage": "Per App VPN list successfully fetched.",
      "messageKey": "com.mobileiron.vsp.messages.appstore.get.perappvpns.success",
      "type": "Info"
    }
  ],
  "results": [
    {
      "name": "VPN 1",
      "id": 12
    },
    {
      "name": "VPN 2",
      "id": 13
    }
  ]
}
```

Delete an app

This call removes an app.

Required Role

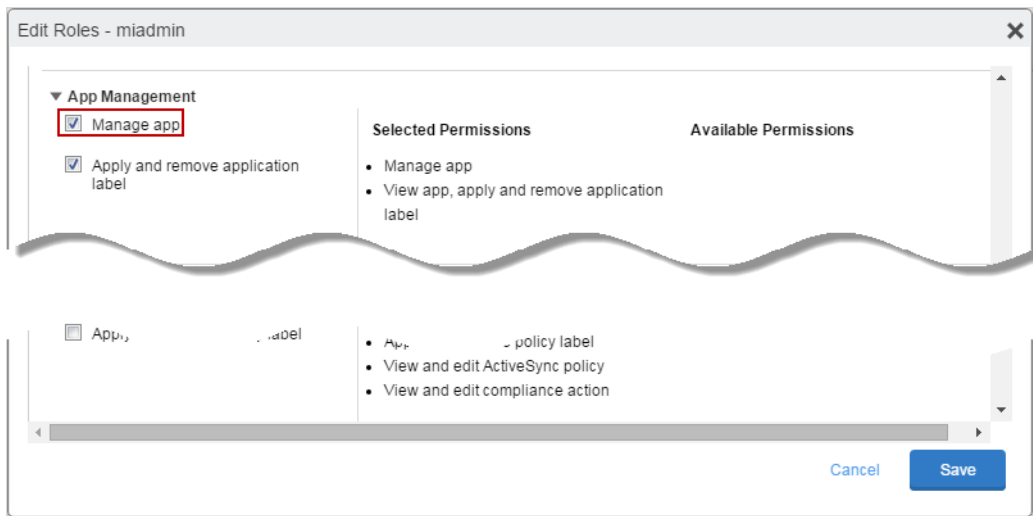

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: App Management

Role Description: Manage app

Finding this role in MobileIron Core

HTTP method

DELETE

Request URI

/api/v2/appstore/apps/{ids}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
ids	Required Parameter Type: Query Data Type: Number ID of the app to remove.	119

Response fields

Field	Description
messages	Container for messages information.
Type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XDELETE 'https://<mobileironcore>/api/v2/appstore/apps/119?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "type": "Info",
      "messageKey": "com.mobileiron.vsp.messages.appstore.remove.app.success",
      "localizedMessage": "App successfully removed."
    }
  ]
}
```

Send a message to an app

This call sends a new install or update message to an app.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: App Management
Role Description: Manage app
Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/appstore/apps/{id}/message

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
id	Required Parameter Type: Path Data Type: Number ID of the app to which to send the message.	117
installIncluded	Parameter Type: Request body Data Type: Boolean Default: false If true, send message for new installs.	false
updateIncluded	Parameter Type: Request body Data Type: Boolean Default: false If true, send message for updates.	false
pushApp	Parameter Type: Request body Data Type: Boolean Default: false If true, push the app.	false
convertToManaged	Parameter Type: Boolean Data Type: Number Default: false If true, convert un-managed to managed app.	false
deviceUids	Parameter Type: Request body Data Type: Array of string Default: null If not null, specifies a specific set of devices to receive the message. If null, devices to receive the message will be determined based on labels.	["a2b149e8-817d-484b-874c-e2113b8524b8", "a8733819-eea9-4e43-b87e-2824d02f7bcf"]

Response fields

Field	Description
messages	Container for messages information.
messageParameters	Parameters for the localized message.

Field	Description
localizedMessage	Localized message with parameters resolved.
messageKey	Message key for the localized message bundle.
type	Indicates the type of the message.
results	A number representing how devices are queued to receive the message.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -H "Content-Type: application/json" --data
'{"installIncluded":true, "updateIncluded":true, "pushApp":true, "convertToManaged":false, "deviceUids":["a2b149e8-817d-484b-874c-e2113b8524b8", "a8733819-eea9-4e43-b87e-2824d02f7bcf"]} ' -XPOST
'https://<mobileironcore>/api/v2/appstore/apps/117/message?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "messageParameters": [],
      "localizedMessage": "\"Send message request queued successfully.\",",
      "messageKey": "com.mobileiron.vsp.messages.appstore.send.message.success",
      "type": "Info"
    }
  ],
  "results": 2
}
```

Apply Apps To Labels

This call applies apps to labels.

Required Role

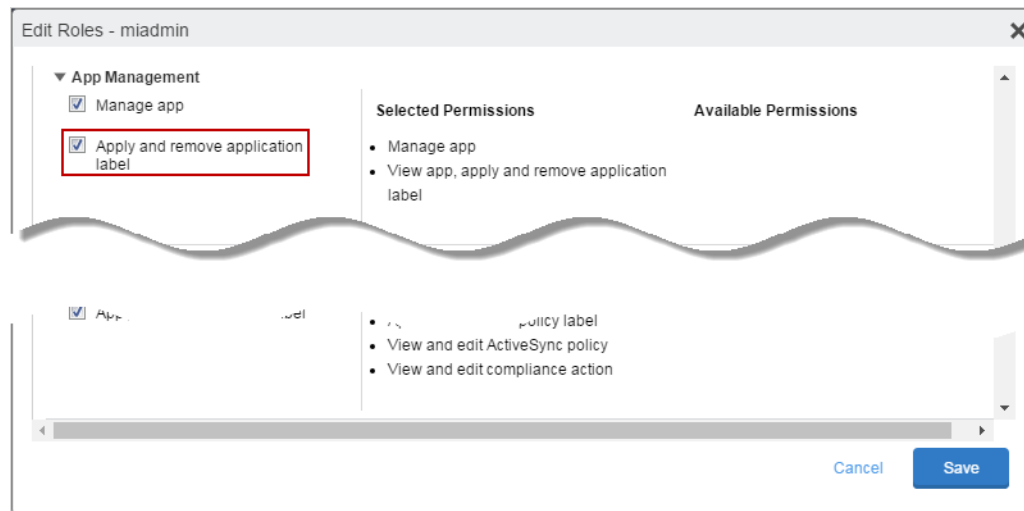

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: App Management

Role Description: Apply and remove application label

Finding this role in MobileIron Core

HTTP method

PUT

Request URI

/api/v2/appstore/apps/{appId}/labels/{labelId}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
appId	Required Parameter Type: Path Data Type: Number IDs of the apps to apply to labels.	119
labelId	Parameter Type: Path Data Type: Number ID of the labels to which to apply the apps.	-1

Response fields

Field	Description
messages	Container for messages information.
type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XPUT 'https://<mobileironcore>/api/v2/appstore/apps/119/labels/-1?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "type": "Info",
      "messageKey": "com.mobileiron.vsp.messages.appstore.apply.label.success",
      "localizedMessage": "App(s) successfully applied to label(s)."
    }
  ]
}
```

Remove Apps From Labels

This call removes apps from labels.

Required Role

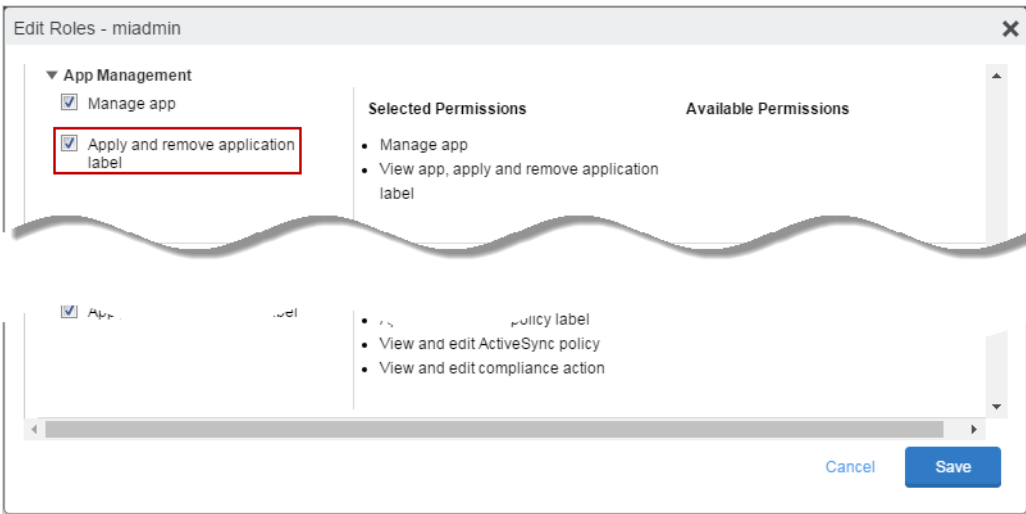

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: App Management

Role Description: Apply and remove application label

Finding this role in MobileIron Core

HTTP method

DELETE

Request URI

/api/v2/appstore/apps/{appId}/labels/{labelId}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
appId	Required Parameter Type: Path Data Type: Number IDs of the apps to remove from labels.	119
labelId	Parameter Type: Path Data Type: Number ID of the labels from which to remove the apps.	-1

Response fields

Field	Description
messages	Container for messages information.
type	Indicates the type of the message.
messageKey	Message key for the localized message bundle.
localizedMessage	Localized message with parameters resolved.

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> -XDELETE 'https://<mobileironcore>/api/v2/appstore/apps/119/labels/-1?adminDeviceSpaceId=1'
```

Response

```
{
  "messages": [
    {
      "type": "Info",
      "messageKey": "com.mobileiron.vsp.messages.appstore.remove.label.success",
      "localizedMessage": "App(s) successfully removed from label(s)."
    }
  ]
}
```

Chapter 7

Audit Logs Management

Export audit logs to a CSV file

Exporting audit logs to a CSV file requires multiple API calls:

- [Initiate the processing of audit logs to be exported:](#)
GET api/v2/logs/audit_logs_export
- [Return the status of the initiation of the export process:](#)
GET api/v2/logs/audit_logs_export_status
- [Initiate the download of the CSV file:](#)
GET api/v2/logs/audit_logs_csv

Initiate the processing of audit logs to be exported

This call initiates audit log processing.

Required Role

See ["Authentication" on page 17](#) for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Logs and Events Management

Role Description: View logs and events

Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/logs/audit_logs_export

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
userActionIds	Parameter Type: Request body Data Type: Integer[] Comma separated values of user action type Ids, The User action type Ids are fetched from the /api/v2/admins/{source}/actions call. If this is empty, then all the user action types will be considered for the search.	
status	Parameter Type: Request body Data Type: String[] Comma separated values of Audit Log status to filter. If this is empty, then returned Audit Logs may contain all kinds of statuses.	Success, Failed, Initiated
subject	Parameter Type: Request body Data Type: String Place holder for a device uuid to filter logs for a particular device.	
actionStart	Parameter Type: Request body Data Type: Number Start time after which the audit logs are required.	
actionEnd	Parameter Type: Request body Data Type: Number This can be used along with actionStart to form a date range during which the Audit logs are required.	

Parameter	Description	Sample Value
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
exportStatusMsg	Audit logs processing initiated/failure message.
isRunning	Boolean value that indicates whether the audit logs processing is initiated/running or not.

Sample Request

```
curl -sS -k -u <userName>:<password> -G https://<mobileironcore>/api/v2/logs/audit_logs_export --data-urlencode 'query="requestedAt" > 1104517800000' --data-urlencode 'sortField=requestedAt' --data-urlencode 'sortOrder=ASC'
```

Sample Responses

Success:

```
{
  "exportStatusMsg": "Initiated processing of Audit Logs to be exported...",
  "isRunning": true
}
```

If the process is already initiated:

```
{
  "exportStatusMsg": "Audit Logs Export is in progress. It might be issued by another admin. Please try after some time.",
  "isRunning": false
}
```

Failure:

```
{
  "exportStatusMsg": "Failed to initiate audit logs export",
  "isRunning": false
}
```

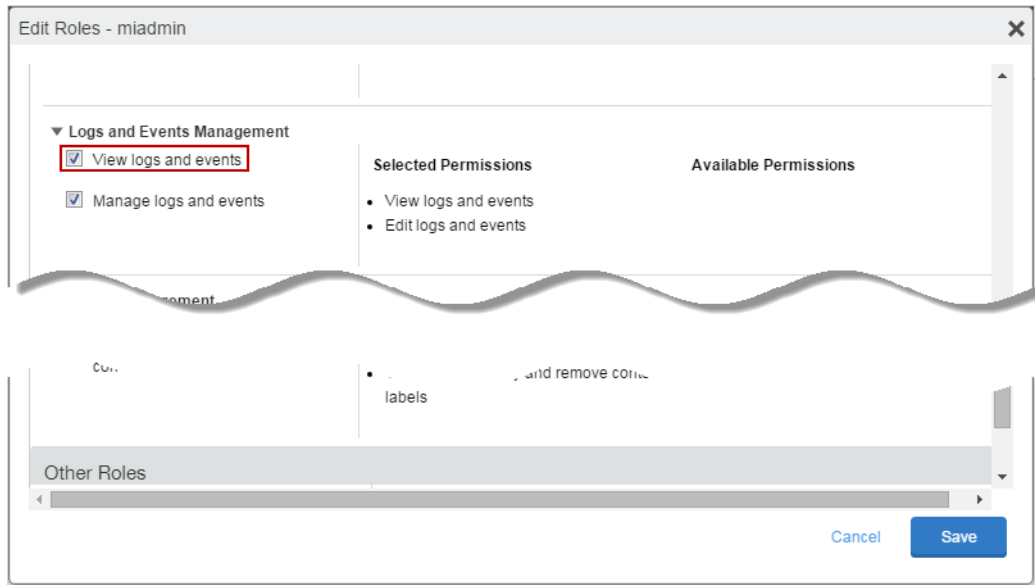

Get status of the export process

This call gets the status of the audit log export process.

Required Role

See ["Authentication" on page 17](#) for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Logs and Events Management
Role Description: View logs and events
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/logs/audit_logs_export_status

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1

Response fields

Field	Description
exportStatusMsg	Audit Logs processing status/progress message. "success" - If the processing is completed successfully. "fail" - If the processing is failed due to server error.
isRunning	Boolean value that indicates whether the audit logs processing is progressing or not.
isExportStatusAvailable	Is the export progress status available.

Sample Request

```
curl -sS -k -u <userName>:<password> -G https://<mobileironcore>/api/v2/logs/audit_logs_export_status
```

Sample Responses

While the processing of audit log entries to be exported is progressing:

```
{
  "exportStatusMsg": "Processed 10,000 of 80,000 audit log entries...",
  "isRunning": true,
  "initiatedAt": "01-22-2005-1106412118809",
  "isExportStatusAvailable": true
}
```

When the processing of audit log entries to be exported is completed successfully:

```
{
  "exportStatusMsg": "success",
  "isRunning": false,
  "isExportStatusAvailable": true
}
```

Failure:

```
{
  "exportStatusMsg": "fail",
  "isRunning": false,
  "isExportStatusAvailable": true
}
```

Download the CSV file

This call downloads the CSV file.

Required Role

See ["Authentication" on page 17](#) for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

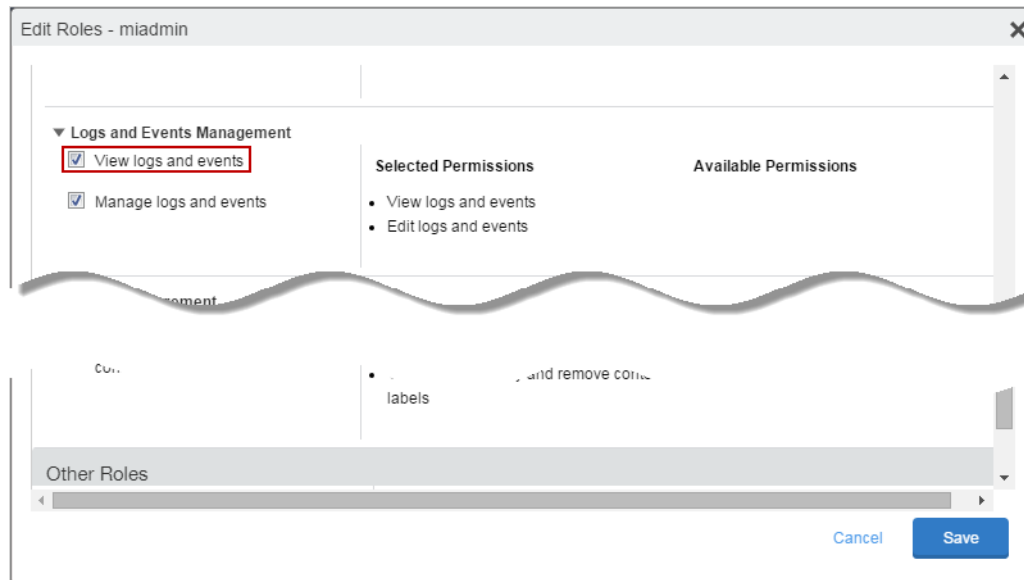

Required Role

Category: Logs and Events Management

Role Description: View logs and events

Required Role

Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/logs/audit_logs_csv

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1

Response fields

Field	Description
Content-type: text/csv	
Content-Disposition: attachment; filename= AuditLogs-<hostname>-<initiatedAt>.csv	

Sample Request

```
curl -sS -k -u <userName>:<password> -G https://<mobileironcore>/api/v2/logs/audit_logs_csv
```

Sample Response

Content-type: text/csv

Content-Disposition: attachment; filename= AuditLogs-<hostname>-<initiatedAt>.csv

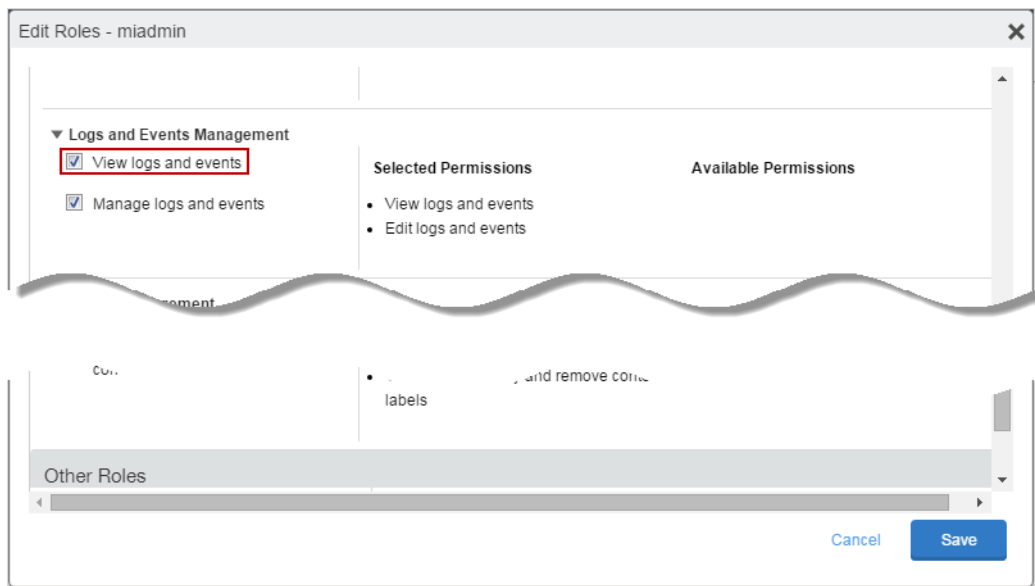

Search/Retrieve audit logs

This call provides access to a search function over the entire set of audit logs.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Logs and Events Management
Role Description: View logs and events
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/logs/audit_logs

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
userActionIds	Parameter Type: Request body Data Type: Integer[] Comma separated values of user action type Ids, The User action type Ids are fetched from /api/v2/admins/{source}/actions . If this is empty then all the user action types will be considered for the search.	
status	Parameter Type: Request body Data Type: String[] Comma separated values of Audit Log status to filter. If this is empty then returned Audit Logs may contain all kinds of statuses.	Success, Failed, Initiated
subject	Parameter Type: Request body Data Type: String Place holder for a device uuid to filter logs for a particular device.	
actionStart	Parameter Type: Request body Data Type: Number Start time after which the audit logs are required.	
actionEnd	Parameter Type: Request body Data Type: Number This can be used along with actionStart to form a date range during which the Audit logs are required.	
limit	Parameter Type: Request body Data Type: Number Min: 0 Max: 200 Default: 200 Indicates the maximum number of entries to return. Must be at least 0 and no more than 200.	

Parameter	Description	Sample Value
offset	Parameter Type: Request body Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
searchTimeMillis	The time in milliseconds that it took to execute the search.
currentServerTimeMilliseconds	The current server time in milliseconds since epoch.
totalCount	The total number of entries that the query matched.
hasMore	Indicates that there are more entries available.
resultCount	The number of entries that are being returned.
results	An array of entry objects. Each object includes just the fields requested.

Sample request and response

Request

```
curl -sS -k -u <userName>:<password> -G https://<mobileironcore>/api/v2/logs/audit_logs --data-urlencode 'adminDeviceSpaceId=1' --data-urlencode 'query="actionType" starts with "A"' --data-urlencode 'fields=common.id' --data-urlencode 'offset=1' --data-urlencode 'limit=2'
```

Response

```
{
  "searchTimeMillis":4,
  "currentServerTimeMilliseconds":1423631757695,
  "totalCount":4,
  "resultCount":2,
```

```

Get action types facets for audit log categories

This call returns action types facets for audit logs categories.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Logs and Events Management
Role Description: View logs and events
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/logs/audit_log_actions/count

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
requestType	Required Parameter Type: Request body Data Type: String Default: actionTypes Indicates the request type for the facets API.	actionTypes
userActionIds	Parameter Type: Request body Data Type: Integer[] Comma separated values of user action type Ids, The User action type Ids are fetched from the /api/v2/admins/{source}/actions call. If this is empty, then all the user action types will be considered for the search.	
status	Parameter Type: Request body Data Type: String[] Comma separated values of Audit Log status to filter. If this is empty, then returned Audit Logs may contain all kinds of statuses.	Success, Failed, Initiated
subject	Parameter Type: Request body Data Type: String Place holder for a device uuid to filter logs for a particular device.	
actionStart	Parameter Type: Request body Data Type: Number Start time after which the audit logs are required.	
actionEnd	Parameter Type: Request body Data Type: Number This can be used along with actionStart to form a date range during which the Audit logs are required.	

Parameter	Description	Sample Value
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
requestType	Type of Request
totalCount	The total number of entries that the query matched.
rows	Rows of entries with following : <pre>{ name: "Action Name", count:"Action Count", query: "Query specified" }</pre>
resultCount	The number of entries that are being returned.
results	An array of entry objects. Each object includes just the fields requested.

Sample request and response

Request

```
curl -sS -k -u <userName>:<password> -G https://<mobileironcore>/api/v2/logs/audit_log_actions/count
--data-urlencode 'query=' --data-urlencode 'requestType=actionType' --data-urlencode 'sortOrder=ASC' --data-urlencode 'sortField=requestedAt'

Chapter 8

Device Management

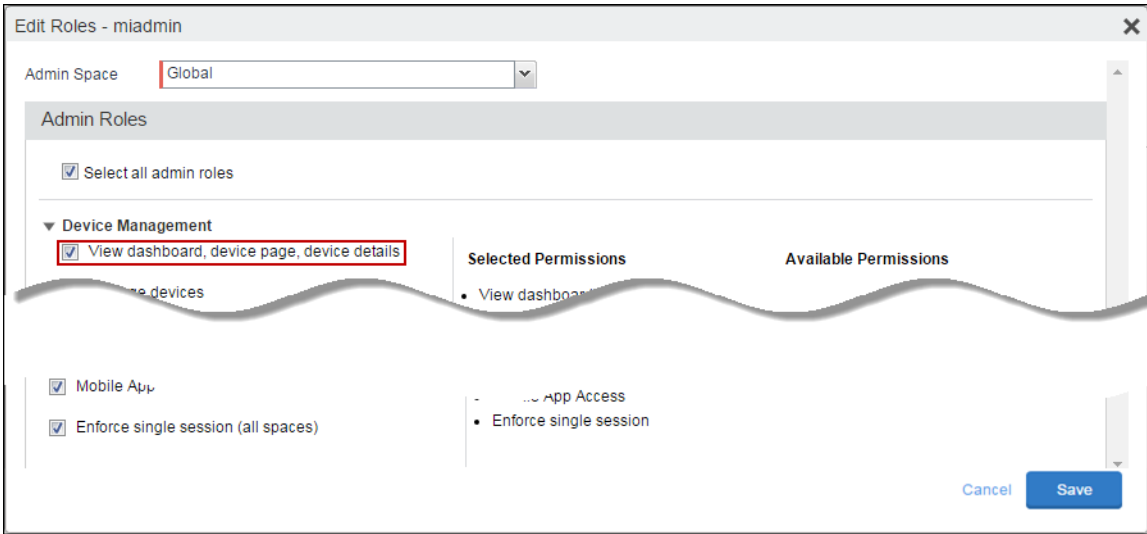

Search for devices

This call returns information about devices. There are three ways to get device information: filtered by a search query, filtered by label, or filtered by both a search query and a label.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Device Management
Role Description: View dashboard, device page, device details
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/devices

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
query	Required: One of either the query or labelId parameters is required, and you can use both in the same call, but not both with an advanced query. Parameter Type: Query Data Type: String Min: 0 character Max: 2000 characters Search expression. An empty query returns everything. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	
labelId	Required: One of either the labelId or query parameter is required, and you can use both in the same call. Parameter Type: Query Data Type: Number The Label ID.	
fields	Required Parameter Type: Query Data Type: List of strings Min: 1 field Max: 512 fields Comma-separated list of the names of fields to be returned; Each field should be no more than 320 characters long. See "Valid fields Parameter Values" on page 230 for a list of valid values, and "Get the list of searchable device fields" on page 176 for how to query for the values.	user.display_name%2C common.current_phon e_number
limit	Parameter Type: Query Data Type: Number Min: 0 Indicates the maximum number of entries to return. Must be at least 0 and no more than 200.	

Parameter	Description	Sample Value
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
results	An array of retrieved objects. Each object includes just the fields requested with the fields parameter.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
hasMore	Indicates that there are more entries available.

Sample request and response

Request

Search for smart phones with "Lumia" in their name.

```
{noformat}

```

Act on a device

This call performs one of the following actions on a device:

- ENABLE_VOICE_ROAMING (iOS)
- DISABLE_VOICE_ROAMING (iOS)
- ENABLE_DATA_ROAMING (iOS)
- DISABLE_DATA_ROAMING (iOS)
- ENABLE_PERSONAL_HOTSPOT (iOS)
- DISABLE_PERSONAL_HOTSPOT (iOS)
- UNLOCK_APP_CONNECT_CONTAINER (Android)
- UNLOCK_DEVICE_ONLY (Android, iOS)

Required Role

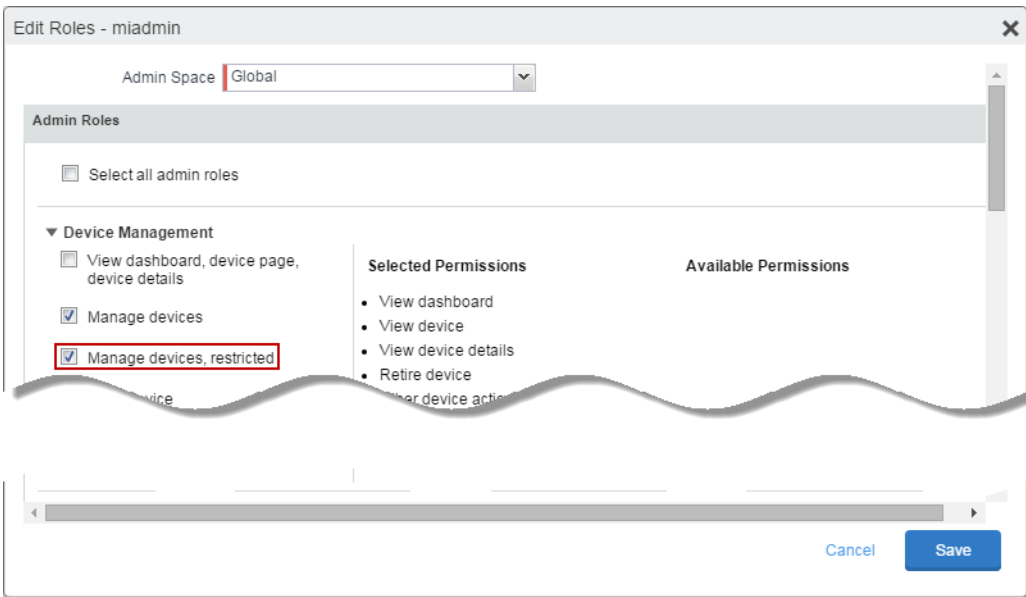

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Device Management

Role Description: Manage devices, restricted

Finding this role in MobileIron Core

HTTP method

POST

Request URI

api/v2/devices/action

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
actionType	Required Parameter Type: Query Data Type: String The action to perform. One of: <ul style="list-style-type: none">• ENABLE_VOICE_ROAMING (iOS)• DISABLE_VOICE_ROAMING (iOS)• ENABLE_DATA_ROAMING (iOS)• DISABLE_DATA_ROAMING (iOS)• ENABLE_PERSONAL_HOTSPOT (iOS)• DISABLE_PERSONAL_HOTSPOT (iOS)• UNLOCK_APP_CONNECT_CONTAINER (Android)• UNLOCK_DEVICE_ONLY (Android, iOS)	ENABLE_VOICE_ROAMING
deviceUids	Required Parameter Type: Request body Data Type: Array of UUID Strings UUID Strings of the devices on which to perform the action.	a2556e62-2ed0-4d42-98fd-a342eaf3e4e6
note	Parameter Type: Request body Data Type: String Min: 1 character Max: 200 characters Note describing the action.	Turning off voice roaming.

Response fields

Field	Description
actionType	The action that was successful.
deviceResults	A map of "device-uuid":"status", where the status describes whether the action succeeded or why it failed.
successful	Returns "true" if the action is successful on all devices, or "false" if the action is not successful on one or more devices.

Sample request and response

Request

Enable data roaming.

```
curl -k -sS -u <userName>:<password> -v -XPOST 'https://<mobileironcore>/api/v2/devices/action?admin-DeviceSpaceId=1&actionType=ENABLE_VOICE_ROAMING' -d '{ "deviceUuids": ["a2556e62-2ed0-4d42-98fd-a342eaf3e4e6","aa0a05dc-14c9-4355-9640-406b5c219c06","d427879e-bdce-469a-810e-d38eef39bf8e"], "note": "sample note" }' -H 'Content-Type:application/json'
```

Response

```
{
  "actionType": "ENABLE_VOICE_ROAMING",
  "deviceResults": {
    "a68bb0cf-7a35-4d52-8259-c83398a41160": "com.mobileiron.vsp.messages.device.action.successful"
  },
  "successful": true
}
```

Export devices

This call returns a CSV file for all devices found by the search. Use the fieldGroups parameter to specify a list of field groups to be returned in the CSV file.

Required Role

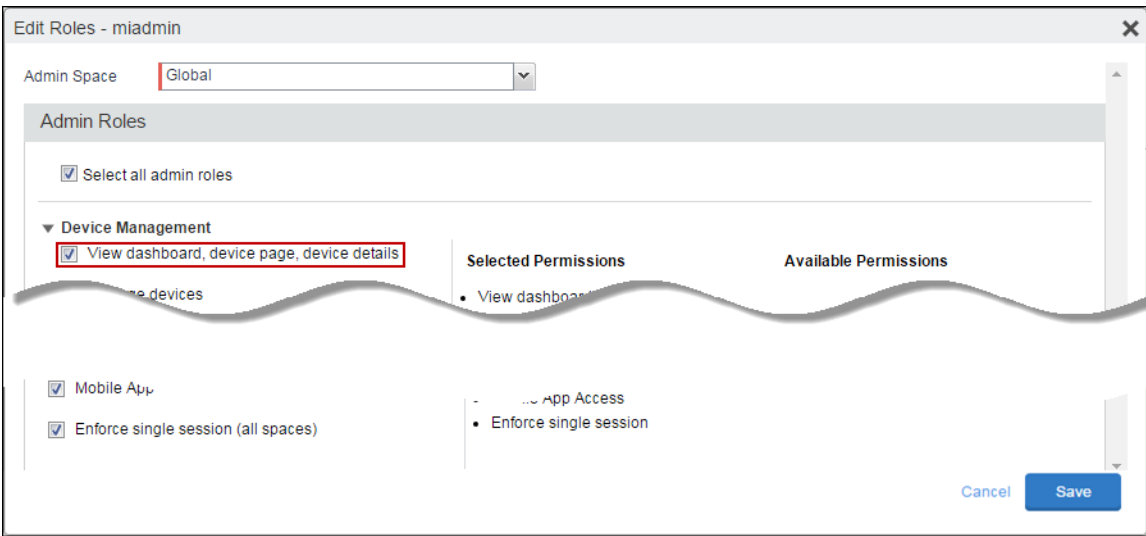

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Device Management

Role Description: View dashboard, device page, device details

Finding this role in MobileIron Core

HTTP method

POST

Request URI

api/v2/devices

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
query	Required: One of either the query or labelId parameters is required, and you can use both in the same call. Parameter Type: Query Data Type: String Min: 0 character Max: 2000 characters Search expression. An empty query returns everything. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	
labelId	Required: One of either the labelId or query parameter is required, and you can use both in the same call. Parameter Type: Query Data Type: Number The Label ID.	
fieldGroups	Required Parameter Type: Query Data Type: List of strings Min: 1 field group Max: 20 field groups Comma-separated list of the names of field groups to be returned. Each field group should be no more than 20 characters long. May be any sequence of the following group names: "BASIC", "COMMON", "ANDROID", "IOS", "USER", "WINDOWS_PHONE"	USER,COMMON,ANDROID,IOS,WINDOWS_PHONE
limit	Parameter Type: Query Data Type: Number Min: 0 Max: 5000 Default: 5000 Indicates the maximum number of entries to return.	

Parameter	Description	Sample Value
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response values

Content-Type: text/csv

Content-Disposition: attachment; filename= DeviceSearchResult.csv

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/devices?fieldGroups=USER%"2CCOMMON%"2CAN-DROID%"2CIOS%"2CWINDOWS_PHONE&labelId=-10&query=" -H "Content-type: application/json" --data "authUserId=bWlhZG1pbG%"3D%"3D"
```

Response

Response is a CSV file containing the retrieved values.

Delete devices

This call deletes retired iOS, OS X, Win8, or Android devices that have not been modified in the last day.

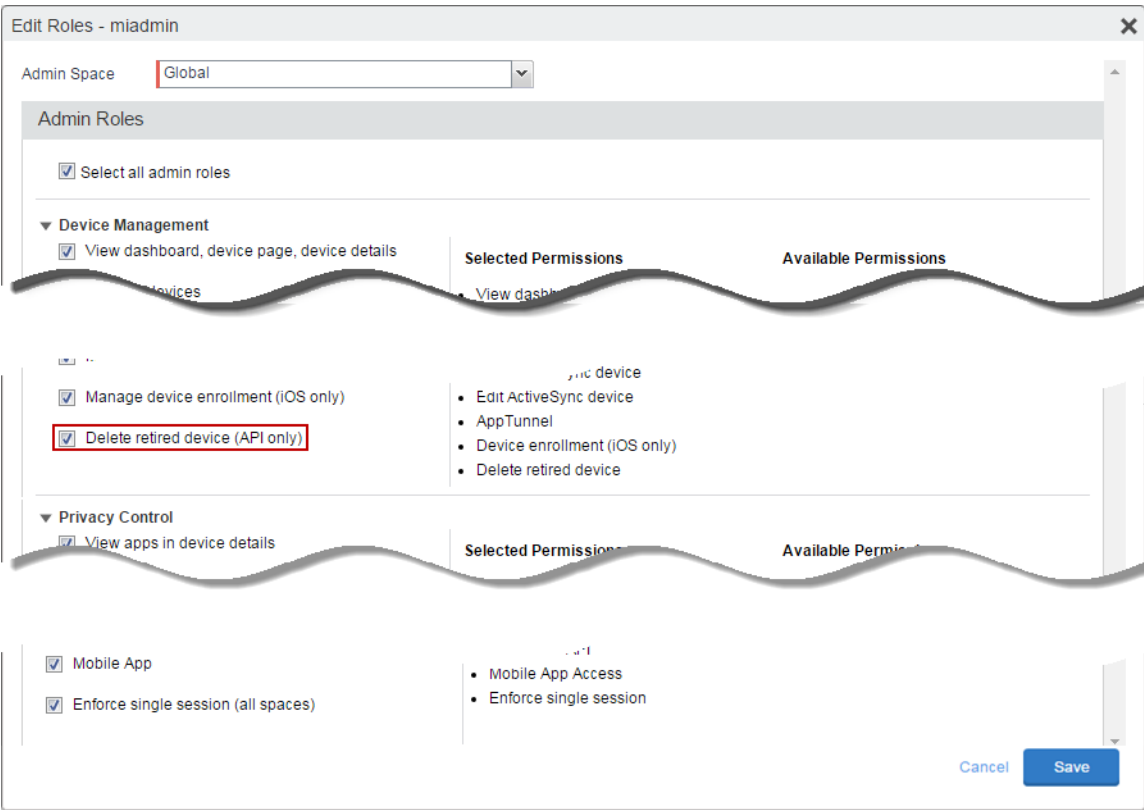

Required Role

Required Role

Category: Device Management

Role Description: Delete retired device (API only)

Finding this role in MobileIron Core

HTTP method

DELETE

Request URI

api/v2/devices

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	
deviceUids	Parameter Type: Request body Data Type: Array of strings Min: 1 deviceUuid Max: 512 deviceUids Comma-separated list of device uids to delete if retired and is of platform iOS, OS X, Win8, Android.	10c43352-15b2-413b-a3e0-4daf3977711a
wifiMacs	Parameter Type: Request body Data Type: Array of strings Min: 1 wifiMacs Max: 512 wifiMacs Comma-separated list of wifiMacs to delete if retired and is of platform iOS, OS X, Win8, Android.	2a393b114f7c
principals	Parameter Type: Request body Data Type: Array of strings Min: 1 principals Max: 512 principals Comma-separated list of principals to delete if retired and is of platform iOS, OS X, Win8, Android.	

Response object

A JSON object containing the following fields:

Field	Description
(unnamed)	An array of the UUIDs of those devices that were eligible to be deleted. An empty list means no devices deleted.

Sample request and response

Request

```
curl -k -sS -u username:password -XDELETE -H "Content-Type: application/json" 'https://[mobileiron-core]/api/v2/devices?adminDeviceSpaceId=1' -d '{ "deviceUids" : [ "10c43352-15b2-413b-a3e0-4daf3977711a", "B0BAB9BA-388E-4612-B579-43A40411670C" ] }'
```

Response

Only the first UUID was returned because it met the criteria for deletion. The second UUID was not deleted, either because it was not retired, it had been modified within the last day, or it was not of the correct platform.

```
[  
  "10c43352-15b2-413b-a3e0-4daf3977711a"  
]
```

Count devices

This call returns the count of devices that match the specified query.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Device Management
Role Description: View dashboard, device page, device details
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/devices/count

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	adminDeviceSpaceId=1
query	Required Parameter Type: Query Data Type: Number Min: 0 characters Max: 2000 characters Search expression. An empty query returns the count of all devices. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	query="common.manufacturer" starts with "Appl"

Response fields

Field	Description
totalCount	The total number of entries that the query matched.

Sample request and response

Request

Count all devices that are manufactured by Apple.

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpnNaTRtYW4xMQ==" https://mobileironcore]/api/v2/devices/count?adminDeviceSpaceId=1&query="common.manufacturer" starts with "Appl"
```

Response

```
{
  "totalCount": 117
}
```

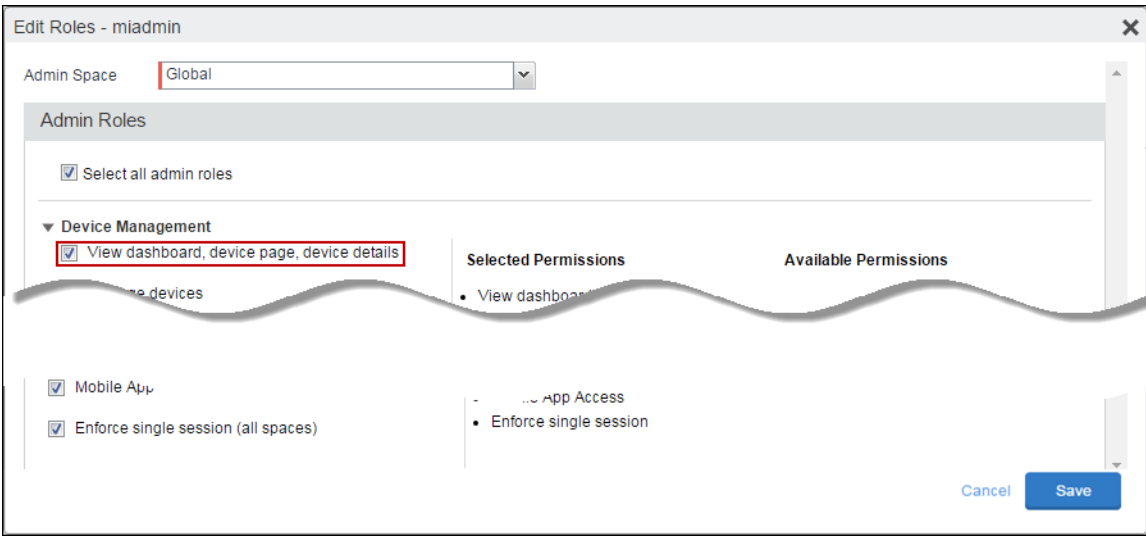

Test an advanced search query

This call tests that the device-search query parses correctly.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Device Management
Role Description: View dashboard, device page, device details
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/devices/query_test

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	adminDeviceSpaceId=1
query	Required Parameter Type: Query Data Type: Number Min: 0 characters Max: 2000 characters Search expression. An empty query is valid. See "Query Operators and Search Fields" on page 232 for complete details on the query operators and search fields you can use to construct the query parameter statement.	query=manufacturer contains "Apple"

Response fields

Field	Description
valid	True if the query was valid; false otherwise.
token	Represents the offending token if the query was invalid; the empty string otherwise.
position	The index of the first character of the offending token relative to the beginning of the line in which it occurs, 0..n-1; -1 otherwise.

Sample request and response

Request

Validate the query.

```
curl -G -k -sS -u username:password 'https://[mobileironcore]/api/v2/device/query_test' --data 'query%3Dmanufacturer%20contains%20%22blargle%22'
```

Response

```
{
  "valid": false,
  "token": "blargle",
  "position": 21
}
```

Get the list of searchable device fields

This call gets the name and type of device, details, and LDAP fields. You can use this information to find values for the fields parameter for any of the API calls that allow specification of search fields, such as "Search for devices" on page 159.

Required Role

See "Authentication" on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Device Management
Role Description: View dashboard, device page, device details
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/devices/search_fields

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	

Response fields

An array of field-name-to-data-type objects:

Field	Description
name	The name of the field, which may be prefixed with the group to which the field belongs. For example, "detail.APNS Capable" or "ldap.user.first_name".
type	The data type of the field, which could be "STRING", "NUMBER", or "DATE".

Sample request and response

Request

Get the fields.

```
curl -G -k -sS -u username:password 'https://[mobileironcore]/api/v2/device/search_fields'
```

Response

```
[
  { "name" : "uuid", "type" : "STRING" },
  { "name" : "block_reason", "type" : "NUMBER" },
  { "name" : "last_connected_at", "type" : "DATE" },
  { "name" : "details.APNS Capable", "type" : "STRING" },
  { "name" : "ldap.user.baseDn", "type" : "STRING" }
]
```

Get device details

This call gets device details for a specific device.

Required Role

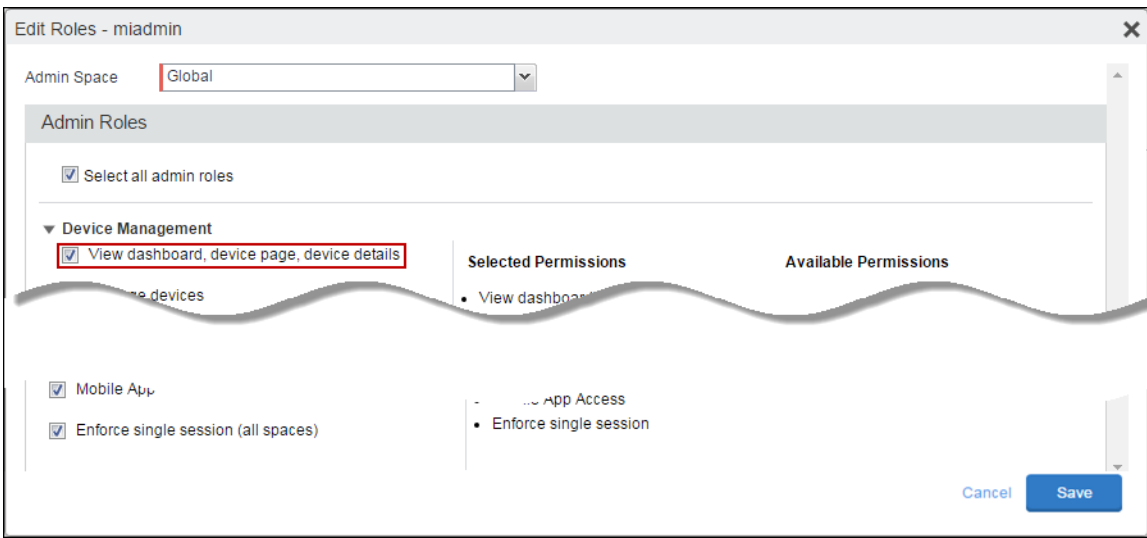

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Device Management

Role Description: View dashboard, device page, device details

Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/devices/<deviceId>/details

Request parameters

Parameter	Description	Sample Value
deviceId	Required Parameter Type: Path Data Type: String The deviceId is the device UUID.	2e33329d-fed5-4f56-a2b7-65caa5ef0cfe

Response fields

Field	Description
results	Container for the array of detail objects returned.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/devices/2e33329d-fed5-4f56-a2b7-65caa5ef0cfe/details -H  
"authUserId: bWlhZG1pbG==" -H "Accept: application/json"
```

Response

```
{  
  results: [  
    {  
      name: "ios.ProductName",  
      value: null  
    },  
    {  
      name: "common.current_operator_name",  
      value: null  
    },  
    {  
      name: "ios.security_reason_code",  
      value: "0x00000008"  
    },  
    {  
      name: "common.registration_imsi",  
      value: "310410"  
    },  
    ... {  
      name: "ios.BluetoothMAC",  
      value: null  
    },  
    {  
      name: "ios.IsDeviceLocatorServiceEnabled",  
      value: false  
    }  
  ],  
  totalCount: 84,  
  resultCount: 84  
}
```

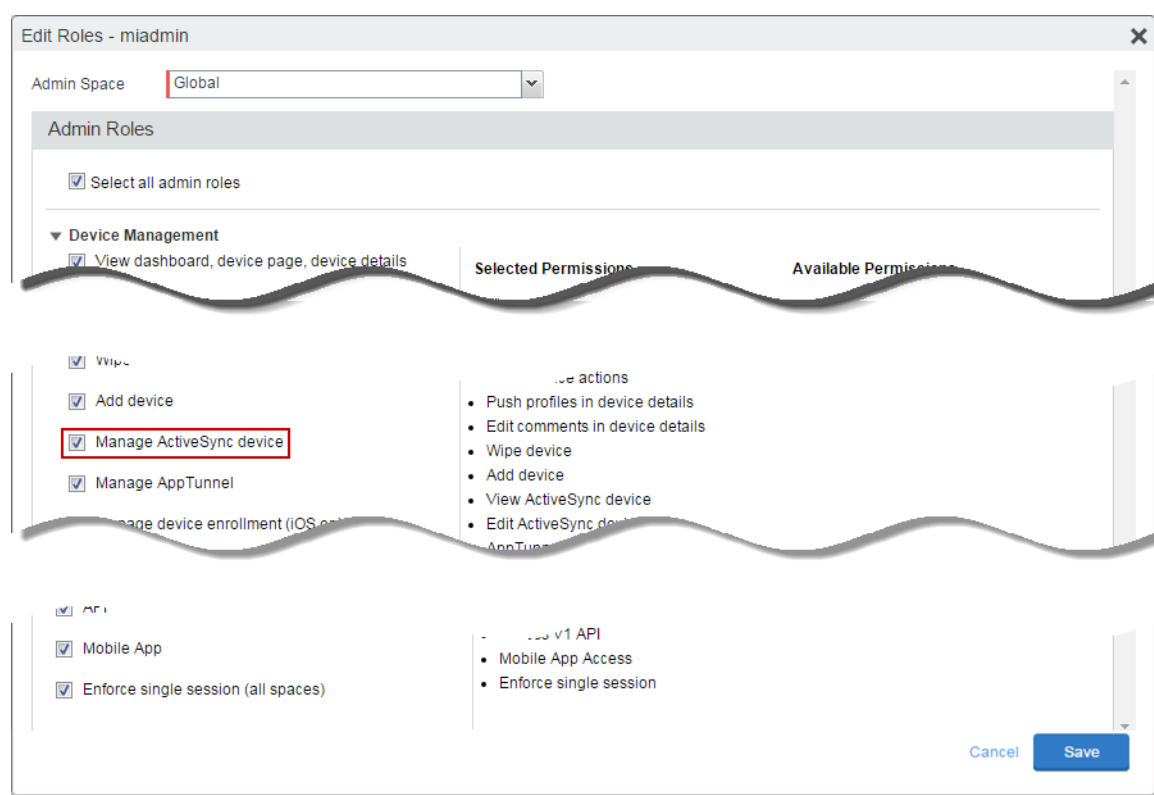

Get Last Sync Time and State of ActiveSync Devices

This call gets the sync time and state of ActiveSync devices. The CSV output of this call is a helpful reference for operators who retire devices from MobileIron and need to remove the same devices from the ActiveSync profile on Microsoft Exchange. For example, an admin could create PowerShell scripts to read the response of this call and delete devices from the ActiveSync profile on Microsoft Exchange that have not synced in a week.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Device Management
Role Description: Manage ActiveSync device
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/V2/activesync/devicereport?daysIdle=0&state=a

Request parameters

Parameter	Description	Sample Value
daysIdle	Required Parameter Type: Query Data Type: Integer Enter a value corresponding the number of days idle devices should be to be returned by the call. For example, to find devices that have been idle for one day, use 1 (one). Use 0 (zero) to find devices regardless of the last session time.	0
state	Parameter Type: Query Data Type: String Valid values: <ul style="list-style-type: none">• a Searches for allowed devices• b Searches for blocked devices• w Searches for wiped devices• q Searches for allowed quarantined devices• r Searches for retired devices For ease of use, the call accepts the entire word. For example, instead of "state=r", the call would accept "state=retired". Note: except for retired , all values correspond to ActiveSyncStatus enumeration. "retired" corresponds to eas_device entries with the trash flag set to true.	a

Response fields

This call returns information about ActiveSync devices matching search criteria in the HTTP response body in CSV format. The first line is the CSV column header line, followed by the actual ActiveSync device data, one row per ActiveSync device.

Field	Description
DeviceId	ActiveSync Device ID
MailboxId	Mailbox ID
Status	This is the device status. One of: <ul style="list-style-type: none"> Registered Unregistered
SyncStatus	ActiveSync status. One of: <ul style="list-style-type: none"> Allowed Blocked Wiped Quarantined
Retired	One of: <ul style="list-style-type: none"> true false
LastSyncTime	Last session time, formatted in GMT. The format is always yyyy-MM-dd hh:mm:ss z.
SentryType	One of: <ul style="list-style-type: none"> Standalone Integrated

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpnTRtYW4xMQ==" https://[mobileironcore]/api/v2/activesync/devicereport/?daysIdle=0&state=A
```

Response

```
DeviceId,MailboxId,Status,SyncStatus,Retired,LastSyncTime,SentryType
DeviceID-1,someone@company.com,Unregistered,Allowed,false,2015-03-30 03:14:57 GMT,Standalone
DeviceID-2,someone@company.com,Registered,Blocked,false,2015-03-31 03:14:57 GMT,Integrated
DeviceID-3,someone@company.com,Unregistered,Unknown,true,2015-04-01 03:14:57 GMT,Integrated
```

Get app control compliance information for a device

This call gets app control compliance information for a device.

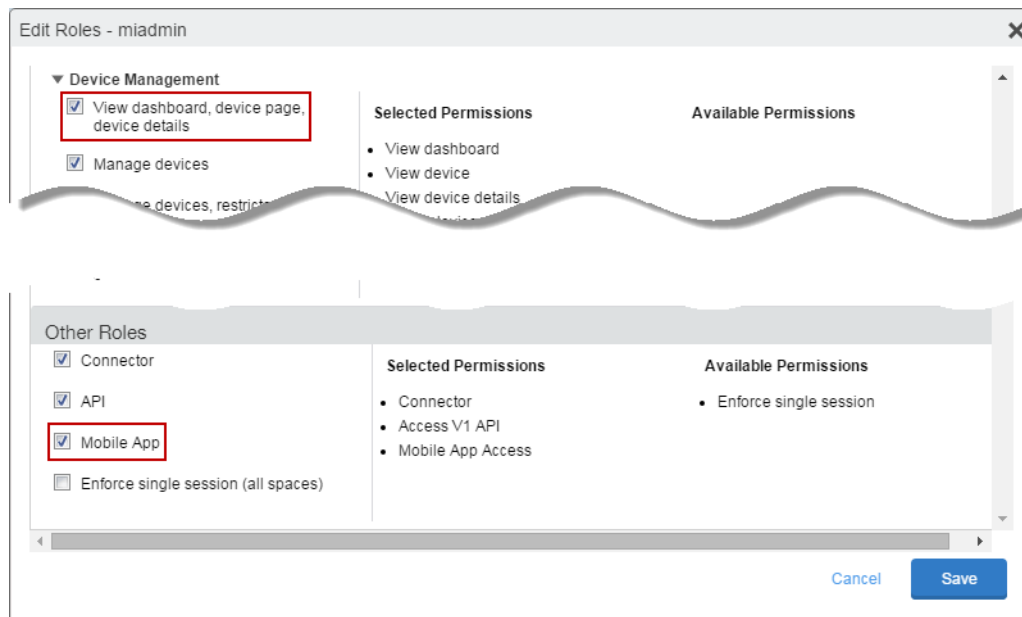

Required Roles

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Roles

- **Category:** Device Management
Role Description: View dashboard, device page, device details
 - **Category:** Other Roles
Role Description: Mobile App
-

Finding these roles in MobileIron Core

HTTP method

}
}
}
}

```

Chapter 9

Device Spaces Management

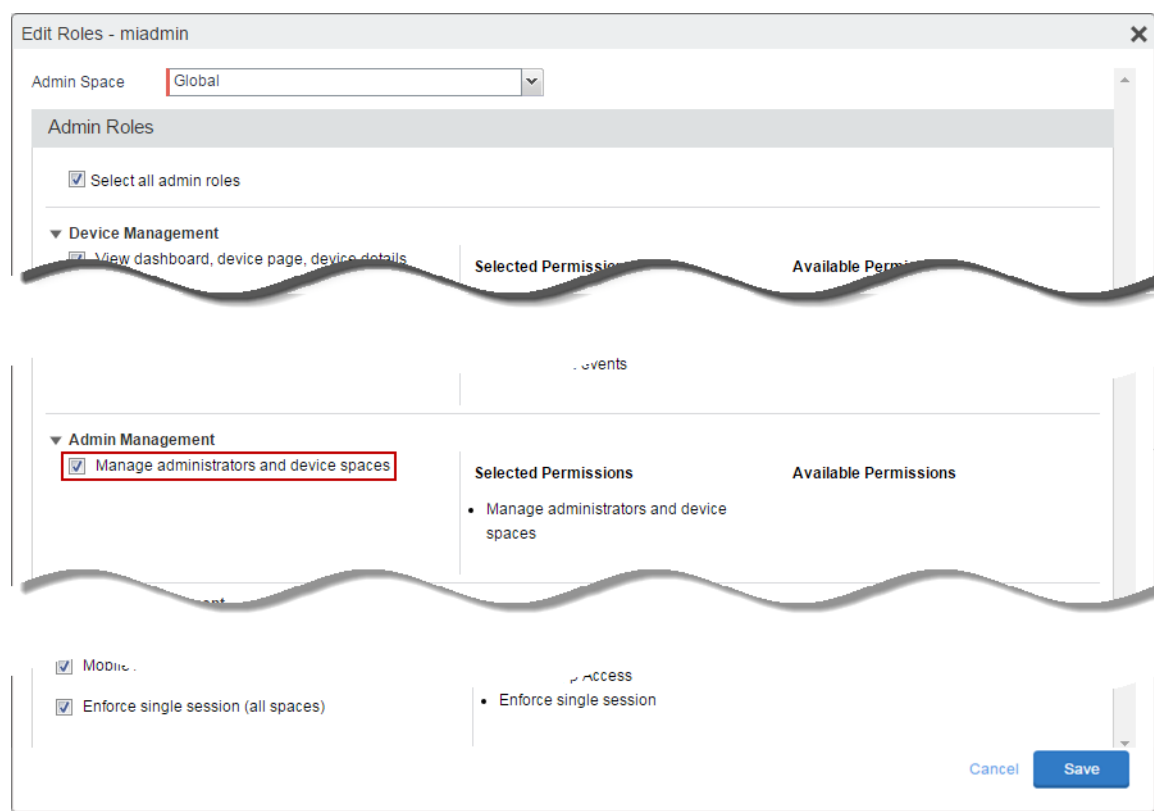

List device spaces

This call returns information on all device spaces, including name, the criteria used to create the device space, status, priority, device count, and the device space admins.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/device_spaces

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Default: 0 Device space ID of the administrator.	
limit	Parameter Type: Query Data Type: Number Min: 0 character Max: 10,000 characters Default: 10,000 Indicates the maximum number of entries to return. Must be at least 0 and no more than 10,000.	5000
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
excludeDeviceCount	Parameter Type: Query Data Type: Boolean Default: false true = deviceCount field returned is always zero and you should ignore this value. false = deviceCount field contains actual device count. If you do not need the device count, then call it with "excludeDeviceCount=true," which yields faster results.	

Response fields

Field	Description
results	An array of entry objects: id, device space name, criteria, status, priority, device count, and the admins of the device space.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
hasMore	Indicates that there are more entries available.

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpwNaTRtYW4xMQ==" https://[mobileironcore]/api/v2/device_spaces?adminDeviceSpaceId=1&limit=50&sort&dir=ASC&offset=0&page=1&start=0
```

Response

```
{
  "results": [
    {
      "id": 1,
      "name": "Global",
      "criteria": "",
      "status": "ACTIVE",
      "priority": 1,
      "deviceCount": 319,
      "admins": "miadmin"
    }
  ],
  "totalCount": 1,
  "resultCount": 1,
  "hasMore": false
}
```

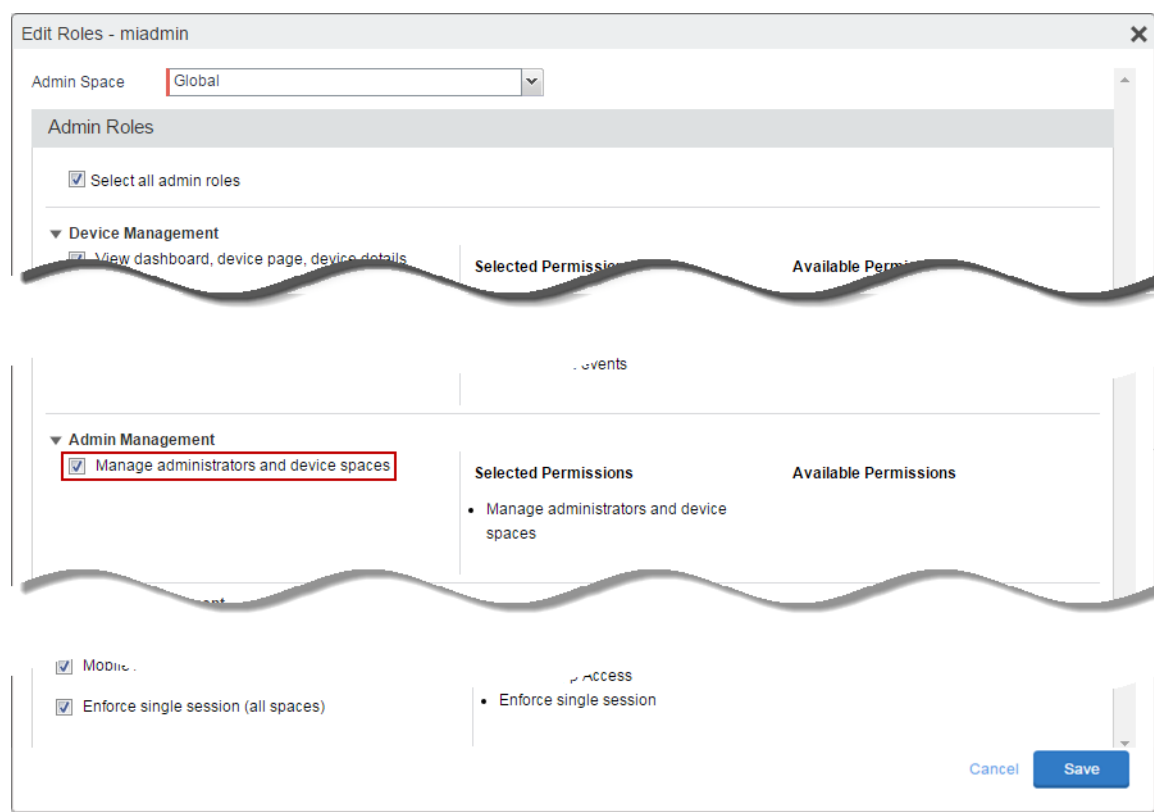

Get my device spaces

This call gets a list of device spaces to which the currently logged in user belongs.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/device_spaces/mine

Request parameters

none

Response fields

Field	Description
results	An array of device spaces: id, device space name, and the description of the device space.
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
hasMore	Indicates that there are more entries available.

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpaTRtYW4xMQ==" https://[mobileironcore]/api/v2/device_spaces/mine?adminDeviceSpaceId=1&limit=50&sort&dir=ASC&offset=0&page=1&start=0
```

Response

```
{
  "results": [
    {
      "id": 1,
      "name": "Global",
      "description": null
    }
  ],
  "totalCount": 1,
  "resultCount": 1
}
```

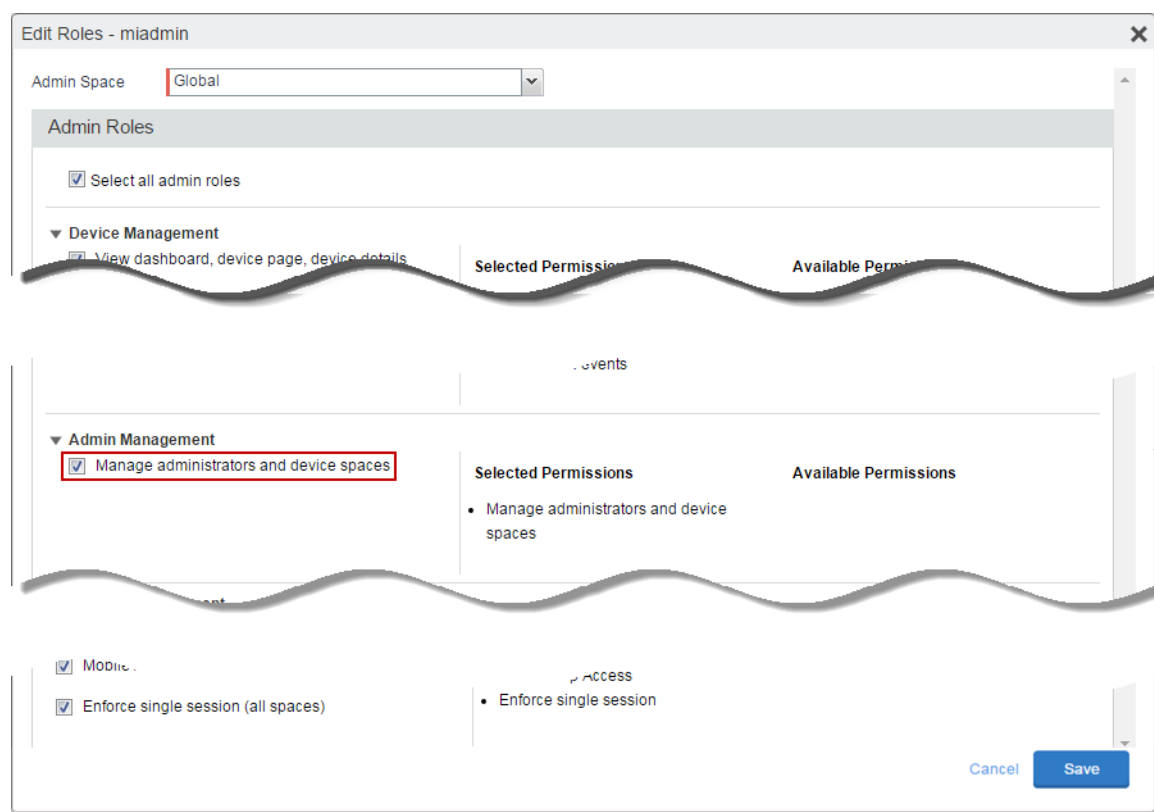

List fields for device space criteria

This call returns a list of the advanced search fields used for creating a device space.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/device_spaces/criteria

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Default: 0 Device space ID of the administrator.	

Sample request and response

Request

```
curl -X GET -H "Authorization: Basic bWlhZG1pbjpnATRtYW4xMQ==" https://[mobileironcore]/api/v2/device_spaces/criteria?adminDeviceSpaceId=1
```

Response

```
{
  "results": [
    {
      "name": "common.home_country_code",
      "type": "STRING"
    },
    {
      "name": "common.home_country_name",
      "type": "STRING"
    },
    ... {
      "name": "user.user_id",
      "type": "STRING"
    }
  ],
  "totalCount": 35,
  "resultCount": 35
}
```

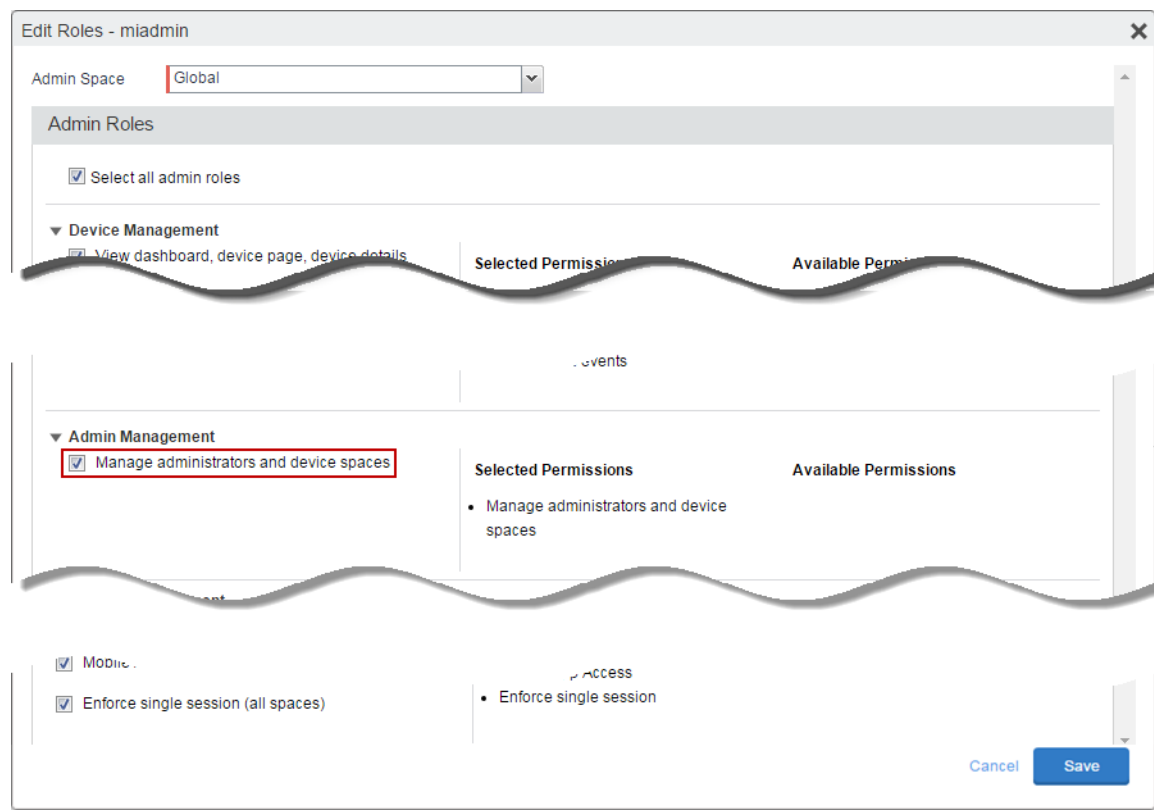

Create or update a device space

This call creates or updates a device space.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

POST

Request URI

api/v2/device_spaces

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Default: 0 Device space ID of the administrator.	
name	Required Parameter Type: Request body Data Type: String Name of the space. Name must be unique.	
id	Required when updating a space Parameter Type: Data Type: Number ID of the space. Used for updating a space.	
parentId	Required Parameter Type: Request body Data Type: Number ID of the parent device space. 1 is the ID for the Global device space	
criteria	Required Parameter Type: Request body Data Type: String Space criteria. See Space Criteria for a list of valid values. ??? Need to add.	<pre>""criteria"":""\\""common.home_country_code\\"" = \\""US\\"" AND \\""common.home_country_name\\"" = \\""United States\\""", "name": ""USA Devices""}</pre>

Response fields

Field	Description
id	The ID of the created or updated device space.

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/device_spaces" -H "authUserId: bWlhZG1pbG==" -H "Accept: application/json" -H "Content-type: application/json" --data-binary '{"parentId":"","criteria":"","common.home_country_code\\"" = \\""US\\"" AND \\""common.home_country_name\\"" = \\""United States\\""", "name": ""USA Devices"}'
```

Response

```
{
  "results": {
    "id": 4
  }
}
```

Delete a device space

This call marks a device space for deletion and then MobileIron Core deletes the marked device space within a few hours.

Required Role

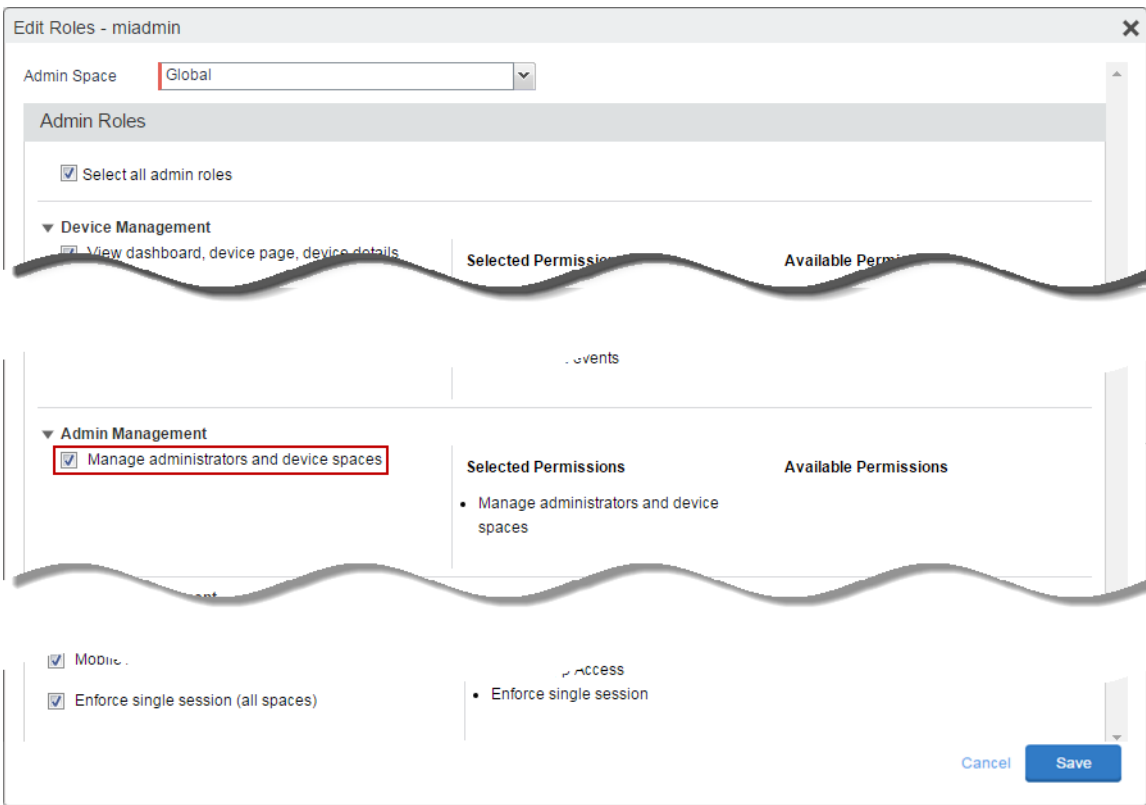

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Admin Management

Role Description: Manage administrators and device spaces

Finding this role in MobileIron Core

HTTP method

DELETE

Request URI

api/v2/device_spaces/[id]

Request parameters

Parameter	Description
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Default: 0 Device space ID of the administrator.
id	Parameter Type: Path Data Type: Number ID of the device space to delete. If missing or 0 (zero), the call uses the value of the current device space.

Response fields

Field	Description
id	The ID of the device space marked for deletion.

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/device_spaces/4" -X DELETE -H "Content-Type: application/json"
```

Response

```
{
  "results": {
    "id": 4
  }
}
```

Assign admins to device space

This call assigns admins to a device space.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Admin Management

Role Description: Manage administrators and device spaces

Finding this role in MobileIron Core

HTTP method

POST

Request URI

api/v2/device_spaces/[deviceSpaceId]/admins

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Min: 0 Default: 0 Device space ID of the administrator.	
deviceSpaceId	Required Parameter Type: Path Data Type: Number Min: 1 Max: 10,000,000 The ID of device space ID to which to assign admins	
roles	Required Parameter Type: Request body Data Type: List Min: 1 Max: 100 List of roles to assign to the admins. See "Get a list of admin roles" on page 39 for the call you use to find the values for this parameter.	
adminUsers	Parameter Type: Request body Data Type: List Min: 1 Max: 500 List of admin userIDs (i.e., principals). Each element in the list must be no more than 50 characters in length. May not be used if adminLdapEntities is used.	
adminLdapEntities	Parameter Type: Request body Data Type: List Min: 1 Max: 500 List of admin LDAP entities, composed of a name, an LDAP type and a DN. LDAP type choices are "GROUP", "USER", or "OU". May not be used if adminUsers parameter is used. Note: LDAP entities are not validated against LDAP. You must to pass in the correct values.	

Response fields

This call does not return any response fields, but does return the HTTP 200 OK response code upon success.

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/device_spaces/3/admins" -H "Content-Type: application/json" --data-binary '{"roles": [2,4,5,7,8,3,6,13,14,15,16,33,18,20,21,23,35], "adminLdapEntities": [{"name": "testuser000000", "type": "USER", "dn": "cn=testuser000000,ou=contacts,dc=auto2,dc=mobileiron,dc=com"}]}'
```

Request payload structure

```
{
  "roles": [
    2,
    4,
    5,
    7,
    8,
    3,
    6,
    13,
    14,
    15,
    16,
    33,
    18,
    20,
    21,
    23,
    35
  ],
  "adminLdapEntities": [
    {
      "name": "testuser000000",
      "type": "USER",
      "dn": "cn=testuser000000,ou=contacts,dc=auto2,dc=mobileiron,dc=com"
    }
  ]
}
```

Response

200 OK

Delete admins from device space

This call unassigns admins from a device space.

Required Role

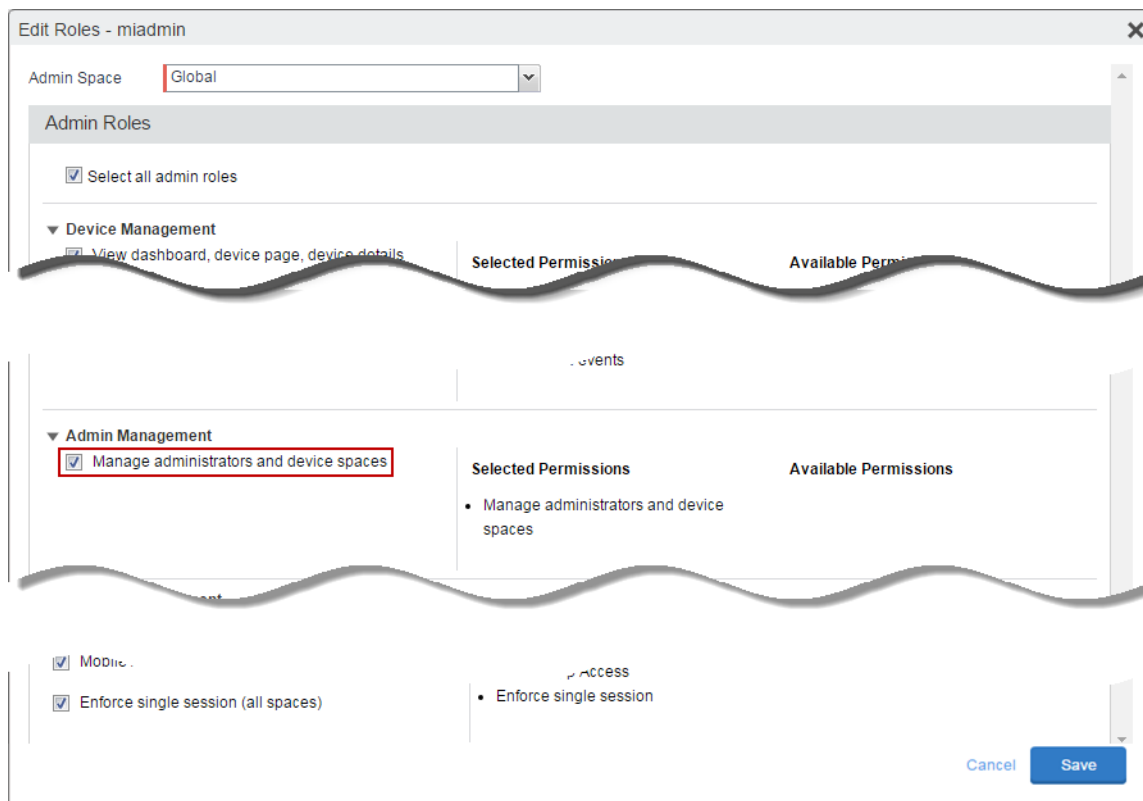

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

DELETE

Request URI

api/v2/device_spaces/[deviceSpaceId]/admins

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Min: 0 Default: 0 Device space ID of the administrator.	
deviceSpaceId	Required Parameter Type: Path and Request body Data Type: Number Min: 1 Max: 10,000,000 The ID of device space from which to delete admins. This call requires this parameter in the request path and in the request body.	
adminUsers	Parameter Type: Request body Data Type: List Min: 1 Max: 500 List of admin userIDs (i.e., principals) to delete as admins. Each element in the list must be no more than 50 characters in length. May not be used if adminLdapEntities is used.	
adminLdapEntities	Parameter Type: Request body Data Type: List Min: 1 Max: 500 List of admin LDAP entities to delete as admins, composed of a name, an LDAP type and a DN. LDAP type choices are "GROUP", "USER", or "OU". May not be used if adminUsers parameter is used. Note: LDAP entities are not validated against LDAP. You must to pass in the correct values.	

Response fields

This call does not return any response fields, but does return the HTTP 200 OK response code upon success.

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/device_spaces/5/admins" -X DELETE -H "Content-Type: application/json" --data-binary '{"deviceSpaceId":5,"adminLdapEntities":[{"name":"testuser000004","type":"USER","dn":"cn=testuser000004,ou=contacts,dc=auto2,dc=mobileiron,dc=com"}]}'
```

Response

200 OK

Change device space priority

This call changes the device space priority.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Admin Management
Role Description: Manage administrators and device spaces
Finding this role in MobileIron Core

HTTP method

POST

Request URI

api/v2/device_spaces/[deviceSpaceId]/change_priority

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Default: 0 Device space ID of the administrator.	
deviceSpaceId	Required Parameter Type: Path Data Type: Number The ID of device space whose priority to change.	
deviceSpaceIdAboveMe	Parameter Type: Request body Data Type: List Min: 1 Max: 500 The ID of the device space whose priority is one step higher than the target device space. Use 0 (zero) if the target device space is to have no other spaces above it.	

Response fields

Field	Description
results	An array of information about the target device space, including id, name, parent device space ID, resultant priority, criteria used for creating the device space, status of the change, and the path.

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/device_spaces/5/change_priority" -H "Content-type: application/json" --data "deviceSpaceIdAboveMe=4"
```

Response

```
{
  "results": {
    "id": 5,
    "name": "UK Devices",
    "parentId": 1,
    "priority": 2,
    "criteria": "\"common.home_country_code\" = \"GB\"",
    "criteriaFields": "-",
    "status": "PENDING",
  }
}
```

```
    "path": "/1/5/"  
  }  
}
```

Evaluate device spaces

This call evaluates the status of all device spaces. For example, if you mark a device space for deletion, you can then evaluate the device spaces to determine the status of the pending deletion.

Required Role

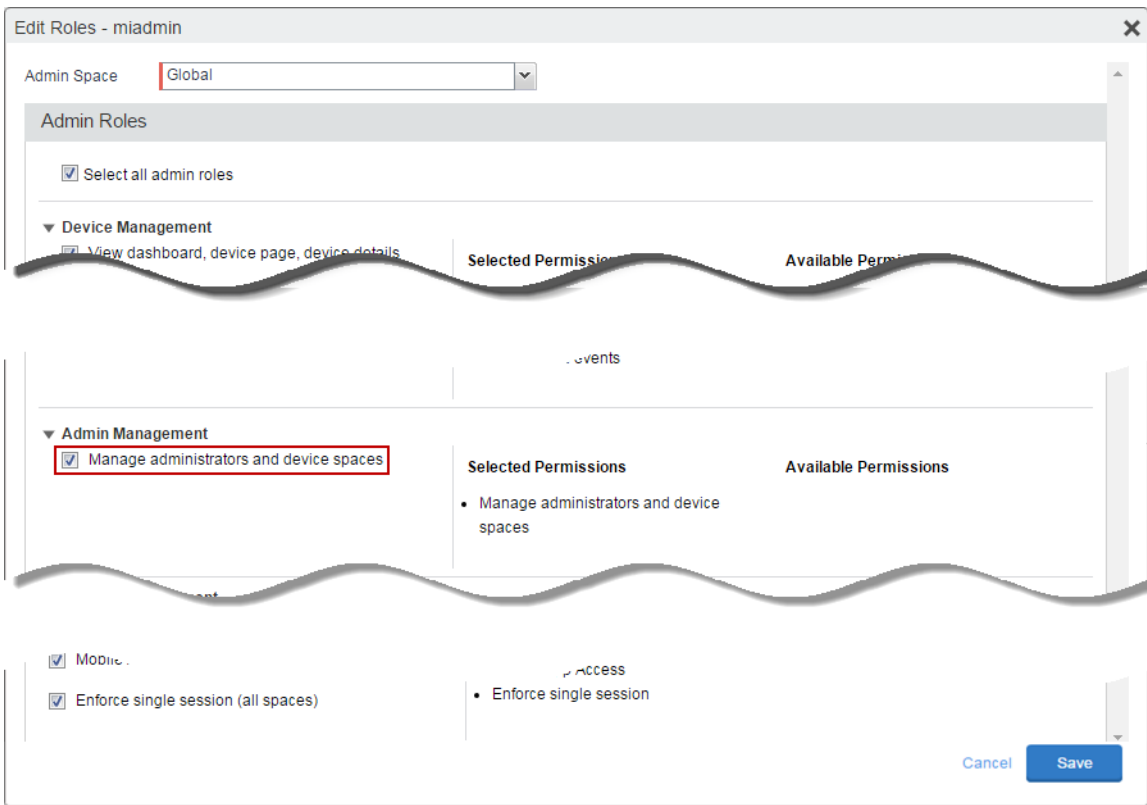

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Admin Management

Role Description: Manage administrators and device spaces

Finding this role in MobileIron Core

HTTP method

POST

Request URI

api/v2/device_spaces/evaluate

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Parameter Type: Query Data Type: Number Default: 0 Device space ID of the administrator.	

Response fields

This call does not return any response fields, but does return the HTTP 200 OK response code upon success.

Sample request and response

Request

```
curl "https://[mobileironcore]/api/v2/device_spaces/evaluate" -H "Content-type: application/json" --data "includeLabelEvaluation=1"
```

Response

200 OK

Chapter 10

Label Management

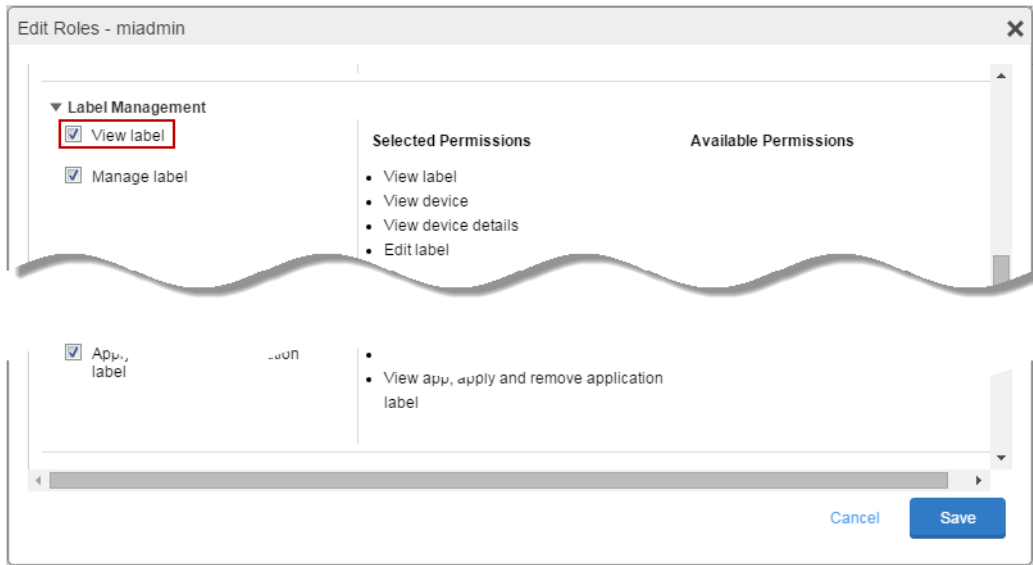

Get information on all labels

This call returns information on all labels.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Label Management
Role Description: View label
Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/label_summary

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
limit	Parameter Type: Query Data Type: Number Min: 0 Indicates the maximum number of entries to return. Must be at least 0 and no more than 200.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
hasMore	Indicates that there are more entries available.
results	An array of retrieved objects shown below.
id	
name	
description	

Field	Description
isStatic	
criteria	
deviceCount	
deviceSpaceId	
deviceSpaceName	
deviceSpacePath	

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> 'https://<mobileironcore>/api/v2/labels/label_summary?adminDeviceSpaceId=1'
```

Response

```
{
  "totalCount": 10,
  "resultCount": 10,
  "hasMore": false,
  "results": [
    {
      "id": -1,
      "name": "All-Smartphones",
      "description": "Label for all devices irrespective of OS",
      "isStatic": false,
      "criteria": " \"common.retired\"=false",
      "deviceCount": 0,
      "deviceSpaceId": 1,
      "deviceSpaceName": "Global",
      "deviceSpacePath": "/1/"
    },
    ...
  ]
}
```

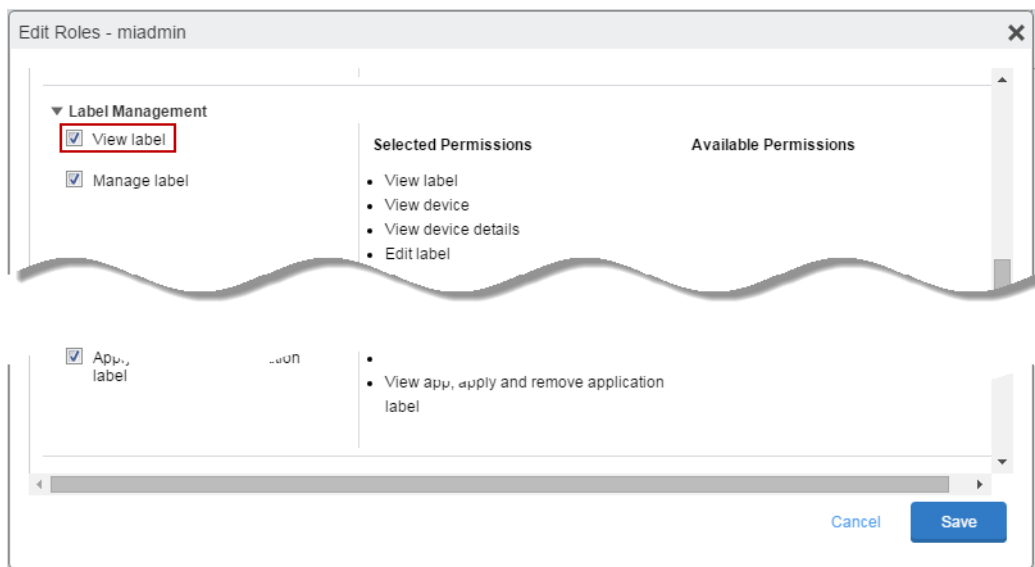

Get label usage information

This call provides the usage summary of a label.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role
Category: Label Management
Role Description: View label
Finding this role in MobileIron Core

HTTP method

GET

Request URI

api/v2/labels/{labelid}/label_usage_summary

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
-labelId	Required Parameter Type: Path Data Type: Number Note that you need to precede the value with a dash.	-11

Response fields

Field	Description
policies	
configs	
id	
name	
description	
applications	
deviceCount	
policyCount	
configCount	
userCount	
applicationCount	

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> 'https://<mobileironcore>/api/v2/labels/-11/label_usage_summary?adminDeviceSpaceId=1'
```

Response

```
{
  "policies": [],
  "configs": [
    {
      "id": -2,
      "name": " System - iOS MDM",
      "description": "Default MDM profile for iOS management."
    }
  ],
}
```

```
"applications": [],  
"deviceCount": 0,  
"policyCount": 0,  
"configCount": 1,  
"userCount": 0,  
"applicationCount": 0  
}
```

Get information about a specific label

This call provides information about a specific label.

Required Role

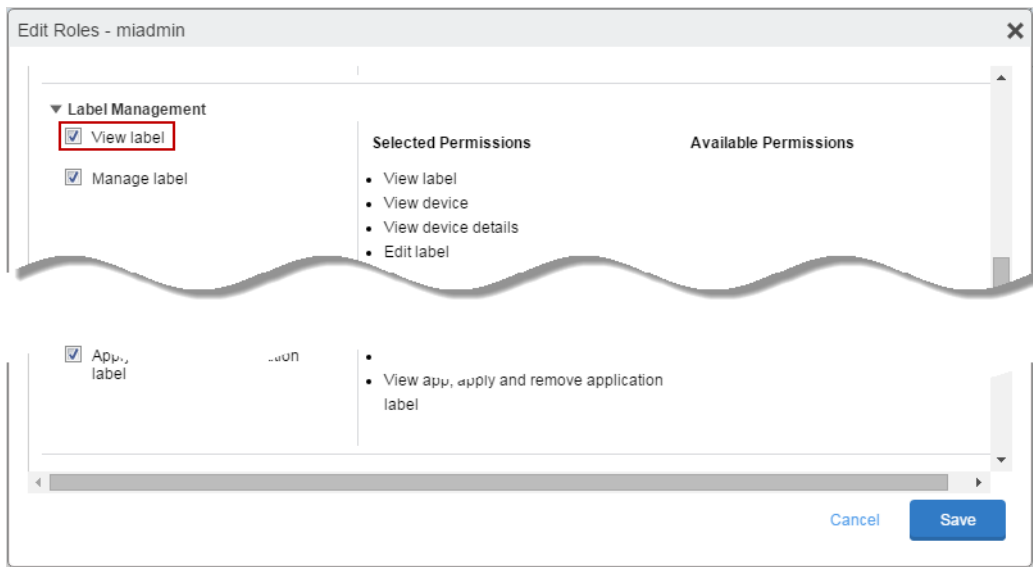

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Label Management

Role Description: View label

Finding this role in MobileIron Core

HTTP method

GET

Request URI

/api/v2/labels/{labelId}

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
-labelId	Required Parameter Type: Path Data Type: Number Note that you need to precede the value with a dash.	-11

Response fields

Field	Description
results	Array of the fields shown below.
uuid	
id	
principal	
deviceSpaceId	
deviceSpacePath	
name	
description	
state	
staticLabel	
searchCriteria	
query	
deviceCount	
isESSearch	
devices	
deviceUids	
type	
rowType	
assetId	
assetName	

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> 'https://<mobileironcore>/api/v2/labels/-11?adminDeviceSpaceId=1'
```

Response

```
{
  "results": {
    "uuid": null,
    "id": -11,
    "principal": null,
    "deviceSpaceId": 1,
    "deviceSpacePath": "/1/",
    "name": "OS X",
    "description": "Label for all OS X Devices.",
    "state": null,
    "staticLabel": false,
    "searchCriteria": [],
    "query": "\"common.platform\"=\"OS X\" AND \"common.retired\"=false",
    "deviceCount": 0,
    "isESSearch": "t",
    "devices": [],
    "deviceUuids": null,
    "type": "LABEL",
    "rowType": "SYSTEM",
    "assetId": "-11",
    "assetName": "OS X"
  }
}
```

Add/Edit a label

This call adds a new label or updates an existing label.

Required Role

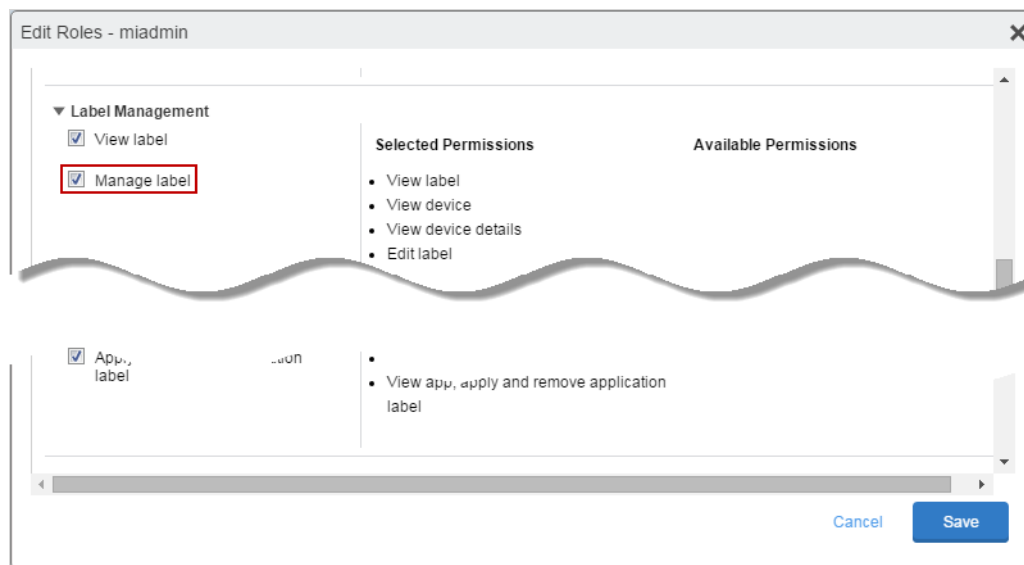

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Label Management

Role Description: Manage label

Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/labels

Request parameters

Parameter	Description	Sample Value
deviceSpaceId	Required Parameter Type: Request body Data Type: Number Device space ID of the administrator.	1
criteria	Required Parameter Type: Request body Data Type: String Label criteria.	common.platform="Android" AND "common.retired"=false
description	Required Parameter Type: Request body Data Type: String Description of the label.	Label for all Android Phones.
labelId	Required if editing an existing label. Omit if adding a new label. Parameter Type: Request body Data Type: Number Precede the label with a dash.	-10
name	Required Parameter Type: Request body Data Type: Number Name of the label.	Android
static	Required Parameter Type: Request body Data Type: Boolean Determines whether the label is static.	false

Response fields

Field	Description
results	Array of the fields shown below.
uuid	
id	
principal	
deviceSpaceId	
deviceSpacePath	
name	

Field	Description
description	
state	
staticLabel	
searchCriteria	
query	
deviceCount	
isESSearch	
devices	
deviceUuids	
type	
rowType	
assetId	
assetName	

Sample request and response

Request

Edit the label with labelId of -10:

```
curl -k -sS -u <userName>:<password> 'https://<mobileironcore>/api/v2/labels/' --data-binary '{
  "name": "Android 2",
  "description": "Label for all Android Phones.",
  "deviceSpaceId": 1,
  "static": false,
  "criteria": "\"common.platform\"=\"Android\" AND \"common.retired\"=false",
  "labelId": "-10"
}'
```

Response

```
{
  "results": {
    "uuid": null,
    "id": -10,
    "principal": "miadmin",
    "deviceSpaceId": 1,
    "deviceSpacePath": "/1/",
    "name": "Android 2",
    "description": "Label for all Android Phones.",
    "state": null,
    "staticLabel": false,
    "searchCriteria": [ ],
    "query": "\"common.platform\"=\"Android\" AND \"common.retired\"=false",
    "deviceCount": 0,
    "isESSearch": "f",
    "devices": [ ],
    "deviceUuids": null,
    "type": "LABEL",
    "rowType": "ADMIN",
    "assetId": "-10",
    "assetName": "Android 2"
  }
}
```

}

Delete a label

This call deletes a label.

Required Role

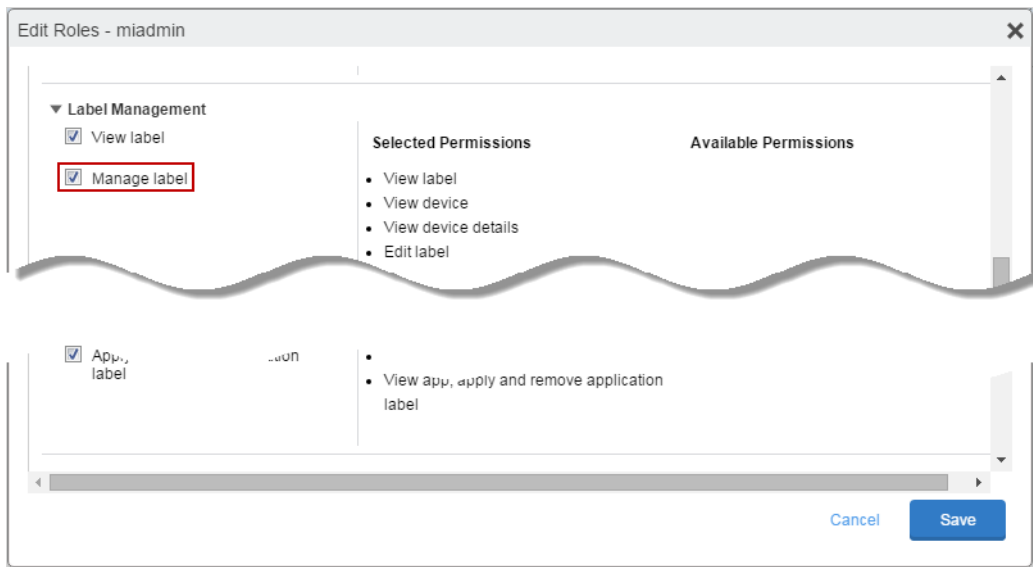

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Role

Category: Label Management

Role Description: Manage label

Finding this role in MobileIron Core

HTTP method

DELETE

Request URI

/api/v2/labels

Request parameters

Parameter	Description	Sample Value
adminDeviceSpaceId	Required Parameter Type: Query Data Type: Number Device space ID of the administrator.	1
-labelId	Required Parameter Type: Request body Data Type: Number Note that you need to precede the value with a dash.	-11
reason	Parameter Type: Request body Data Type: String Reason for deletion.	No longer needed.

Response

200 OK

Sample request and response

Request

```
curl -k -sS -u <userName>:<password> 'https://<mobileironcore>/rest/api/v2/labels/?adminDeviceSpaceId=1' -X DELETE --data-binary '{"reason":"No longer needed","labelIds":[-11]}'
```

Response

200 OK

Get list of applied/non-applied static labels for devices

This call gets a list of applied/non-applied static labels for devices.

Required Role

See “Authentication” on page 17 for complete details on ensuring that the credentials you use for basic authentication belong to a user with the necessary role for this API call.

Required Roles

Category: Label Management

Role Description: Manage label

Finding this role in MobileIron Core

HTTP method

POST

Request URI

/api/v2/devices/labels

Request parameters

Parameter	Description	Sample Value
deviceSpaceId	Required Parameter Type: Request body Data Type: Number Device space ID of the administrator.	1
entityIds	Parameter Type: Request body Data Type: Number A list of device ID for applied labels, empty for non-applied labels.	1,98
query	Required Parameter Type: Request body Data Type: String Name or description of label.	Label for all Android Phones.
assignedOnly	Required if editing an existing label. Omit if adding a new label. Parameter Type: Request body Data Type: Boolean Default: false true to get only assigned labels, otherwise it returns both assigned or unassigned labels	false
limit	Parameter Type: Query Data Type: Number Min: 0 Indicates the maximum number of entries to return. Must be at least 0 and no more than 200.	
offset	Parameter Type: Query Data Type: Number Min: 0 Max: 10,000,000 Default: 0 Indicates the index of the first entry to return.	

Parameter	Description	Sample Value
sortField	Parameter Type: Query Data Type: String Min: 1 character Max: 320 characters Name of the field to use for sorting.	
sortOrder	Parameter Type: Query Data Type: String Default: ASC Indicates the order in which entries are returned. Values can be "ASC" or "DESC".	ASC

Response fields

Field	Description
totalCount	The total number of entries that the query matched.
resultCount	The number of entries that are being returned.
hasMore	Indicates that there are more entries available.
results	Array of the fields shown below.
uuid	
id	
principal	
deviceSpaceId	
deviceSpacePath	
name	
description	
state	
searchCriteria	
applied	
notApplied	
isESSearch	

Sample request and response

Request

Edit the label with labelId of -10:

```
curl --globoff --user <userName>:<password> --data '{
  "entityIds": [
    1,
    98
  ]
}
```

```

    ],
    "offset": 0,
    "limit": 50,
    "page": 1
  }' --request POST 'https://<mobileironcore>/api/v2/devices/labels?adminDeviceSpaceId=1'

```

Response

```

{
  "totalCount": 103,
  "resultCount": 2,
  "hasMore": true,
  "results": [
    {
      "uuid": null,
      "id": 3,

      "name": "L1",
      "description": "",
      "state": "NOT_APPLIED",
      "searchCriteria": null,
      "applied": [ ],
      "notApplied": [
        "100000000"
      ],
      "isESSearch": "t"
    },
    {
      "uuid": null,
      "id": 7,
      "principal": null,
      "deviceSpaceId": 1,
      "deviceSpacePath": null,
      "name": "L3",
      "description": "",
      "state": "NOT_APPLIED",
      "searchCriteria": null,
      "applied": [ ],
      "notApplied": [
        "100000000"
      ],
      "isESSearch": "t"
    }
  ]
}

```

Appendix A

Valid fields Parameter Values

The fields parameter specifies the fields returned by an API call. The following list contains the values you can include with the "fields" parameter when performing device searches:

- android.afw_capable
- android.attestation
- common.background_status
- common.battery_level
- common.client_name
- common.client_version
- common.clientId
- common.comment
- common.compliant
- common.creation_date
- common.current_phone_number
- common.data_protection_enabled
- common.data_protection_reasons
- common.device_admin_enabled
- common.device_is_compromised
- common.device_space_name
- common.ethernet_mac
- common.home_country_name
- common.home_operator_name
- common.id
- common.imei
- common.imsi
- common.ip_address
- common.language
- common.last_connected_at
- common.locale
- common.manufacturer
- common.mdm_managed
- common.memory_capacity

- common.memory_free
- common.miclient_last_connected_at
- common.model
- common.noncompliance_reasons
- common.os_version
- common.owner
- common.platform
- common.platform_name
- common.quarantined
- common.quarantined_reasons
- common.registration_date
- common.status
- common.storage_capacity
- common.storage_capacity
- common.storage_free
- common.uuid
- ios.DataRoamingEnabled
- ios.DeviceName
- ios.iPhone%20ICCID(%20 is an URL encoded space)
- ios.iPhone%20MAC_ADDRESS_EN0 (%20 is an URL encoded space)
- ios.iPhone%20UDID (%20 is an URL encoded space)
- ios.iPhone%20VERSION(%20 is an URL encoded space)
- ios.wakeup_status
- user.display_name
- user.email_address
- user.user_id

Appendix B

Query Operators and Search Fields

This chapter describes the query operators and search fields that you can use with the query parameter.

Valid Query Operators

The query parameter supports the following operators:

Priority	Operator	Operation
1	=	Equals and case-insensitive string comparison
2	>	Is greater than
3	>=	Is greater than or equal to
4	<	Is less than
5	<=	Is less than or equal to
6	"contains"	Case-insensitive substring matching
7	"starts with"	Case-insensitive prefix matching
8	!=	Not Equals
9	"does not contain"	Case-insensitive substring exclusion
10	"is empty"	Is empty
11	"is not empty"	Is not empty

Valid Search Fields

The device search fields include:

- those that are common to all
- Android-only
- iOS-only
- Windows-Phone-only
- user-related, including LDAP.

Common Device Search Fields

Field name format:

"common.<field_name>"

Field	Data Type	Sample Data
apns_capable	boolean	e43f9c41484baf6601b2e80f7390fe195df5
background_status	string	
battery_level	long	15 99
blocked_reasons	array of strings	2
blocked	boolean	2
cellular_technology	string	GSM
client_id	long	1073741831
client_name	string	com.mobileiron
client_build_date	date	Aug 29 2013 13:02:18
client_version	string	5.7.0.1.17R
comment	string	
noncompliance_reasons	array of strings	3
compliant	boolean	3
creation_date	date	2014-01-20 19:08:27
current_country_code	string	US
current_country_name	string	United States
current_operator_name	string	AT&T
current_phone_number	string	PDA
data_protection_enabled	boolean	
data_protection_reasons	array of strings	
device_admin_enabled	boolean	

Field	Data Type	Sample Data
device_is_compromised	boolean	
device_space_ids	array of long values	
device_space_name	string	
device_space_path	string	
display_size	string	1184X768 768x1280

ModemFirmwareVersion	string	04.11.08
ProductName	string	iPad3,4
PasscodePresent	boolean	FALSE
PasscodesCompliantWithProfiles	boolean	TRUE
PasscodesCompliant	boolean	TRUE

Field	Data Type	Sample Data
Personal Hotspot Enabled	boolean	false
security_reason_code	string	0x40000000
SerialNumber	string	DMQL3K0RF182
Supervised	boolean	FALSE
signal_strength	long	31
SIM MCC	string	310
SIM MNC	string	410
Subscriber Carrier Network	string	AT&T
Voice Roaming Enabled	boolean	N/A false true
vpn_ip_address	string	
Wakeup Status	integer	0
IsDEPEnrolledDevice	boolean	true

Windows Phone and Surface Device Search Fields

Field name format:

"windows_phone.<field_name>"

Field	Data Type	Sample Data
dm_client_version	double	1.3
network_adapter	string	Hyper-V Virtual Ethernet Adapter #2
processor_type	string	Intel(R) Core(TM) i5-3570 CPU @ 3.40GHz
wns_channel_url	string	https://bn1.notify.windows.com/ ?token=AgYAAAC1r8nFA5Uhc
wp_cert_renew_timestamp	date	0
wp_ent_dm_id	long	0
wp_exchange_id	string	37D9EC65D7F9CC35AF5B8B944256361A
wp_firmware_version	string	3045.0000.1328.2046
wp_hardware_version	string	1.0.0.0
wp_local_time	date	2013-10-22T20:08:07.0000258-04:00
wp_processor_type	long	0
wp_signed_ent_dm_id	long	0
wp_management_service_address	string	
wp_mpns_notification_uri	string	

Field	Data Type	Sample Data
wp_os_platform	string	
wp_radio_svv	string	
wp_publisher_device_id	string	
wp_ent_device_name	string	

User-Related Device Search Fields

The set of user-related device search fields include:

- local user search fields
- LDAP search fields

Local User Device Search Fields

Field name format:

"user.<field_name>"

Field	Data Type	Sample Data
email_address	string	bsmith@mobileiron.com
display_name	string	BlargleFalargle
first_name	string	Bob
last_admin_portal_login_time	date	1382485711228
last_name	string	Smith
user_id	string	blargle
uuid	string	d0cae3dd-a3dd-46b8-8f5a-564cbe9152ac

LDAP-User Device Search Fields

LDAP-related search fields include:

- basic LDAP-related device search fields
- groups

Basic LDAP-User Device Search Fields

Field name format:

"user.ldap.<field_name>"

Field	Data Type
attr_dn	string
dn	string
locale	string

Field	Data Type
principal	string
upn	string

LDAP User-Attributes Device Search Fields

Field name format:

"user.ldap.user_attributes.<field_name>"

Field	Data Type
custom1	string
custom2	string
custom3	string
custom4	string
<dynamically created custom user-attribute field name #1>	string
<dynamically created custom user-attribute field name #2>	string
<dynamically created custom user-attribute field name #3>	string
<dynamically created custom user-attribute field name #4>	string
<dynamically created user-attribute field names>	array of strings

LDAP-Group Device Search Fields

Field name format:

"user.ldap.groups.<field_name>"

Field	Data Type
dn	string
name	string

Value Enumerations

Values for the "platform" Device Search Field

Value
Android
iOS
OS X
Windows
Windows Phone

Values for the "platform_name" Device Search Field

Value
Android
Android 1.6
Android 2.0
Android 2.0.1
Android 2.1
Android 2.2
Android 2.3
Android 3.0
Android 3.1
Android 4.0
Android 4.0.1
Android 4.0.2
Android 4.0.4
Android 4.1
Android 4.2
Android 4.3
Android 4.4
AppleTV
AppleTV 7.0
BlackBerry
iOS
iOS 4.0
iOS 4.1
iOS 4.2
iOS 4.3
iOS 5.0
iOS 5.1
iOS 6.0
iOS 6.1
iOS 7.0
iOS 7.1
OS X
OS X 10.7
OS X 10.8
OS X 10.9

Value
Web App Platform
Windows
Windows 10
Windows 8.1
Windows Phone
Windows Phone 8
Windows Phone 8.1

Values for the "status" Device Search Field

Enum Name	Meaning
ACTIVE	Active
BLOCKED	Blocked
IENROLL_VERIFIED	Enrollment verified
IENROLL_INPROGRESS	Enrolling
IENROLL_COMPLETE	Enrolled
INFECTED	Infected
LOST	Lost
RETIRED	Retired
VERIFIED	Verified
VERIFICATION_PENDING	Pending
EXPIRED	Expired
WIPED	Wiped
WIPE_PENDING	Wipe pending
UNKNOWN	Unknown status

Values for the "owner" Device Search Field

Name	Meaning
COMPANY	Company-owned device
EMPLOYEE	Employee-owned (personal) device

Array Value Enumerations

Values for the "blocked_reasons", "noncompliance_reasons", and "quarantined_reasons" Device Search Fields

Each of the fields that use these values have an associated field to determine whether any reasons were set or not. For example, if a device is blocked, then the "blocked_reasons" field has a list of reasons, and the "blocked" field is 'true'.

Enum Name	Meaning	Hexadecimal Value
ALLOWED_APP_CONTROL	Allowed app control policy is out of compliance	0x004000
APP_CONTROL	App control policy is out of compliance	0x000040
ATTESTATION_FAILED	Attestation failed.	0x010000
AUTO_BLOCK	Device is not registered	0x000100
COMPROMISED	Device state is compromised	0x000001
DATA_PROTECTION	Data Protection is not enabled	0x000008
DEVICE_ADMIN_DEACTIVE	Device administrator is deactivated	0x000800
DEVICE_OUT_OF_CONTACT	Phone is out of contact	0x000020
DISALLOWED_APP_CONTROL	Disallowed app control policy is out of compliance	0x001000
EXCHANGE	Exchange-reported	0x000400
HW_VERSION	Hardware revision is not allowed	0x000004
LOGGED_OUT	User logged out	0x008000
MANUAL	Device is manually blocked	0x000200
OS_VERSION	OS version is less than the supported OS version	0x000002
PER_MAILBOX_LIMIT	Device exceeds per mailbox limit	0x000080
POLICY_OUT_OF_DATE	Policy is out of date	0x000010
REQUIRED_APP_CONTROL	Required app control policy is out of compliance	0x002000
UNKNOWN	Unknown reason	0x400000
